The DAIWA REEL RANGE 2015

DAIWA

REELS

MAG SEALED

The MAG SEALED principle is based on a special magnetic oil, which has been developed by the NASA to transport fuel to the starships based on the magnetic principle. Such an oil for reel production is not available in the super market. It has to be manufactured under most difficult circumstances. The embedded ferric oxide, which is necessary for the magnetic field has a diameter of 1/100.000mm and is that small, that the surface of a single particle has the tenth of the size of an influenza virus.

The molecules in this new „metal oil“ are capable of changing. If they are exposed to a magnetic field, they change their shape and the oil forms a fluid seal. This magnetic oil is that strong, that it would stick to a magnetic bucket, even if the bottom was cut out. Such a seal, based on the principle of liquid magnetic oil produces nearly no friction, isolates perfectly and prevents even penetrating of little dust particles.

The big challenge for the DAIWA engineers was the development of a reel, which is designed for the principle of the magnetic oil to generate a kind of liquid membrane, that prevents water penetration. The MAG SEAL design is based on the purpose to keep water away from a spinning reel. First of all for sea anglers this is an amazing idea - since it promises a longer life span. No corrosion, better function. If salt water penetrates the reel and dries, it crystallizes, corrodes the gearing and affects the ball bearings.

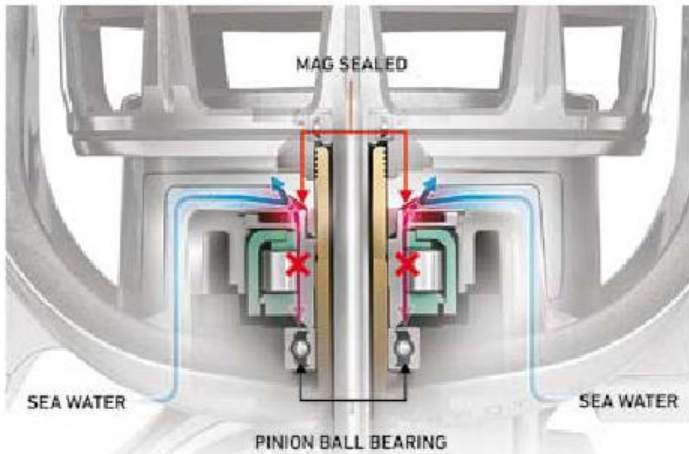

The simplest solution for implementing a sealed mechanism, would have been the usage of a rubber seal. But this would cause such a strong friction, that an isolation of the rotor and axis would have been impossible. Only the use of a metallic oil in combination with a magnet provides the desired isolation effect without heavy friction. Years of research and development were required to develop such a reel isolation.

We call this liquid isolation MAG SEALED.

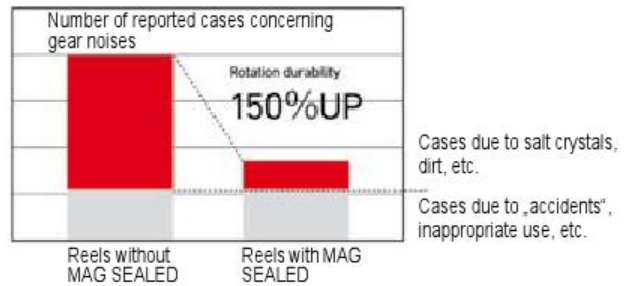

MAG SEALED

To prevent the penetration of water, dust particles or salt crystals between rotor and reel body, we have developed a nearly frictionless barrier based on magnetic oil, which cannot be overcome by neither water nor smallest particles. The result is a silky-smooth running.

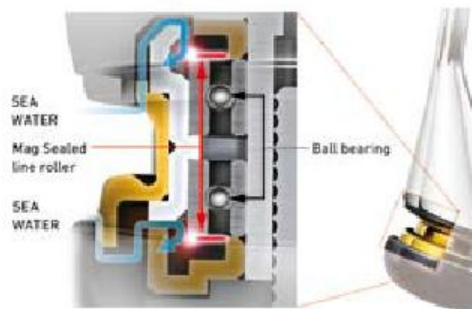

Comparison of reels with/without MAG SEALED. Source: DAIWA Intern. Service Dept.

In most cases, salt crystals and other solid particles are in charge for unpleasant winding noises as well as the loss of smooth running. Of course also „accidents“ can lead to a similar result. Despite these special cases, the cases with unpleasant winding noises are significantly decreased at reels with MAG SEALED, as depicted in the right figure.

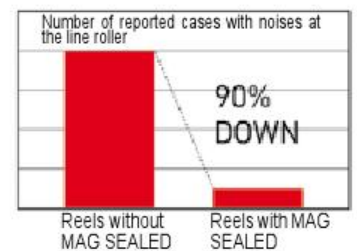

MAG SEALED LINE ROLLER

The smoother a line roller turns, the less friction emerges between line and roller. If delicate salt or dirt particles penetrate the line roller, it is continuously dragged and the friction is considerably increased. Our EXIST was the first reel featuring the MAG SEALED line roller. The magnetic MAG SEAL oil forms a barrier, which prevents the intrusion of water and therefore also of salt and dirt particles into the line roller, which could affect the free rotation.

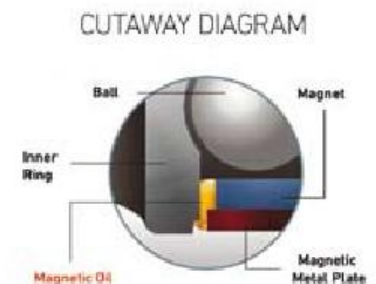

Reels with/without MAG SEALED line roller. Source: DAIWA Intern. Service Dept.

MAG SEALED BALL BEARING

Our DAIWA technology further on changes the fishing tackle market. Our engineers succeeded in further devolving the MAG SEALED invention to a new level. First we sealed the axis, then the line roller and now the ball bearing! MAG SEALED is a new chapter in the history of the fishing reel. Thanks to our targeted research and development, we succeeded in integrating MAG SEALED into a ball bearing. For a long lifespan and a silky-smooth running over a long period. A revolution!

AIR ROTOR

The magnetic oil barrier does not only prevent the intrusion of water, it also increases the ease of motion and the delicacy of feeling of the reel. You feel better connected to the lure, detect softer bites and experience more sensitivity during the fight with the fish. Especially for this new feeling we developed the „Air rotor“. First, the enormous strains, which affect the rotor via the line and the line roller are better distributed. This causes less pressure on the single parts of the rotor. Second, the new rotor is 15% more light weighted than usual rotors of the same material - this reduces vibrations and enhances the rotational balance thanks to a very low center of gravity.

Comparison of distortion-proofness

Air Rotor

Conventional Rotor

Under the same strain, a conventional rotor is much more distorted than an Air Rotor, since here the strain is scattered over the whole rotor and not concentrated to one point.

ZAION

Zaion is an excellent material developed by DAIWA to built reel bodies and rotors. The big advantage of this material is its lightness and solidity - you will feel this. Zaion is a kind of „High Density“ carbon strain material, which is made for highest performance and to resist maximum impact. Due to Zaion, it is possible to construct a lightweight reel body that durably supports the gearing. The strength of Zaion corresponds to magnesium and is 20% stronger than Nylon/ABS material, usually used for reel bodies. Zaion is about 50% lighter than aluminium.

Comparison with standard carbon-strengthened materials for reel bodies and rotors.

White: Basic Material
Black: Carbon Fiber

Standard Material Zaion

Under strain of 10kg

ABS Magnesium-aluminum Zaion

AIRBALL

The AirBall reel handle is hollow and thus very lightweight, extremely strong and exceptionally resilient. The special, strengthening construction prevents the twisting of the line around the bail, which was a big problem for spin anglers in the past.

DAIWA's original advanced technology designed to reduce line twist during retrieving. An essential reason for line twist has been eliminated with this smart idea. The Twist Buster 2 line roller not only minimises line twist, but also reduces further friction between the line and the roller.

AIRMETAL

Reels featuring a magnesium body and rotor are excelled by their drastically reduced weight compared to conventional aluminum reels. Our Air Metal technology processes the magnesium in a special way, leading to full corrosion resistance, which would be not possible without this special processing. Thus, you can enjoy a DAIWA Air Metal magnesium reel also at salt water fishing.

HardBodyz
Light & Rigid Metal Construction

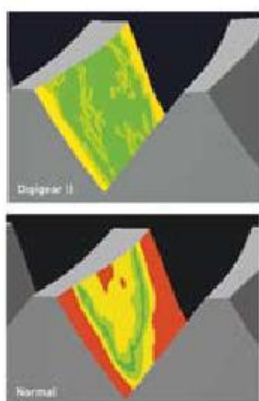

We have the perfect metal alloy, we have the more precise processing and we have the knowledge for building precise, durable and very lightweight metal reels.

We call this technology the HardBody-Z Concept. These reels have many technological advantages and they are not – compared to other synthetic reels – more expensive and in comparison to our traditional reels they have an economic price.

DIGIGEAR

Machined, digitally developed gearing for maximum performance and endurance. Embedded in our HardBody-Z aluminium body, it transmits smoothly and efficiently the power of the handle directly to the rotor. Like this you can concentrate on fishing completely.

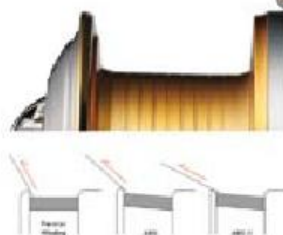

Our DAIWA engineers completely perfected the technology of milled gears with the DigiGear II. The shape and surface of the gear teeth enable the construction of gears with extraordinary smooth running, smallest resistance and extremely long lifespan.

ABS

ANTI-BACKLASH SYSTEM

The super system, that allows long casts and prevents line twist reliably. The running of the line from the spool usually occurs in different big loops depending on the reel's type. The best approach for preventing twist of the line is the generation of large windings. DAIWA reels with ABS have spools, which are constructed in such way that they have a spool guide of a very large diameter which is getting bigger towards the spool's top. Thus there won't emerge any „cones“ during winding this spool. Like this the line unwinds in big loops and very evenly from the spool and thus prevents the twisting of the line. Thanks to this system also longer casts are possible.

U.T. Drag

Excellent drag system from DAIWA. The Ultimate Tournament Drag System includes impregnated drag discs, which are about 30 times more durable than normal discs. The effective drag power is considerably increased compared to normal drag systems. An additional advantage is the reduced start-up resistance - the drag starts working, when the adjusted drag power is reached and drags smoothly and steadily.

SILENT OSCILLATION

By the special position and bearing of the oscillation-gear wheels, we improved the smoothness of the gear in comparison to usual systems of similar construction.

INFINITE ANTI-REVERSE

INFINITE ANTI REVERSE

A weak part of many reels – the most reliable part of a DAIWA reel. Only high-quality parts made of steel with smallest tolerances are used.

CRBB

CRBB is short for Corrosion Resistant Ball Bearings and means salt-water-proof, stainless ball bearings.

CRBB ball bearings feature an 12 times higher corrosion resistance than usual ball bearings.

**NEW****MORETHAN**

The new top model from the Japan range. With this reel our Japanese engineers once again have shown, that innovations at highest level are also possible at reel construction. Especially the MAG SEALED ball bearings are a real highlight, which is hard to excel. The MAG SEALED ball bearings completely isolate this area and therefore lead to a markedly increased life span compared to commonly applied saltwater resistant ball bearings.

The two MAG SEALED ball bearings are located on both sides, where the handle shaft enters the gear. Like this, the intrusion of saltwater and dirt particles via the handle shaft is completely eliminated. The lifespan of the reel therefore is considerably increased, since the gear now is protected from intrusion via the axis thanks to the MAG SEALED mechanism and additionally via the MAG SEALED ball bearings, which shield the driving wheel from the handle shaft.

The MAG SEALED line roller additionally contributes to an easy and permanently smooth running, since this unit is now also protected from saltwater. Due to the use of a semi-shallow spool, the new MORETHAN is as well suited for the use of thin braided as well as mono lines. Perfect for light fishing for zander, pike, sea trout and perch.

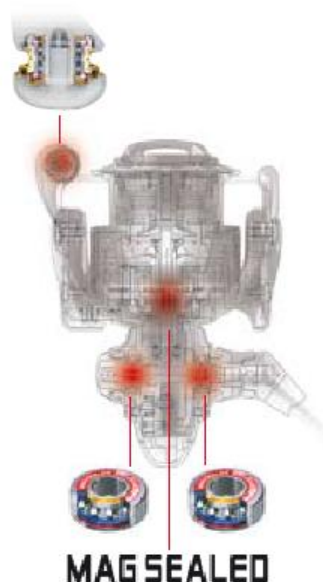

The thick neoprene reel bag protects this premium reel at transport.

EXIST

With the EXIST DAIWA presents another milestone in modern reel engineering. The EXIST features finest technology and doesn't leave any wishes unfulfilled. Thanks to the ultra-lightweight body construction made of distortion proof ZAION material in combination with the MAG SEAL shaft a precise bearing of the gear is ensured. The gear is CNC-cut from one block and resists high strains. The distortion proof AIR rotor is about 15% lighter than conventional rotors and thereby more robust at the same time. Due to the shallow spools this series is perfect for the use of thin braided lines. The ultra-lightweight AIR spool additionally reduces weight. EXIST - reel engineering at its best.

CERTATE

With the second edition of the CERTATE, the application of the revolutionary MAG SEALED technology is further enlarged. Up to now, only the reel body was protected against penetration from water and particles with the MAG SEAL. At the new CERTATE, this technology covers also the line roller, which is completely sealed via nanotechnology – the penetration of particles and salt crystals into the line roller is prevented to 100%. The life span and running smoothness of the gear and the line roller therefore are drastically increased compared to conventional reels. Additionally the rotor of the new CERTATE is completely manufactured from Zaion material, which results in a drastic weight reduction. CERTATE – reel technology from Japan in its ultimate shape.

NEW
INFINITY-Q

The legendary sea trout reel – now also available as MAG SEALED version. Due to the great success of the INFINITY Q, our Japanese engineers have further evolved this reel and equipped it with the MAG SEALED mechanism. The MAG SEALED body construction completely seals the axis via nanotechnology – no saltwater can infiltrate the reel body via the axis. Thus no salt crystals emerge in the gear and a permanently soft and smooth running is guaranteed. The CNC-milled DIGIGEAR ensures highest durability and a silky-smooth running. The perfect reel for fishing for sea trout and pike. Made in Japan!

BALLISTIC EX-H

We are sure, that the new BALLISTIC EX spinning reel will cut a dash. Within this model really everything convinces – the sporty and modern design in combination with the innovative MAG SEALED technology and other, DAIWA-exclusive technical details make this reel a real highlight. Due to the high transmission rate, this reel is perfectly suited for fishing for sea trout! The MAG SEALED mechanism ensures a permanently soft and smooth running of the gear – the intrusion of saltwater via the axis is completely eliminated!

CALDIA SHA

After the great success of the current CALDIA series, the calls for a special model with a higher transmission were growing louder. The new CALDIA SH offers finest Japanese technology in combination with a high transmission – The 3000sized spool offers a line retraction of over 100cm! The construction scheme of the CALDIA is based on the same nanotechnology which is used for the CERTATE reels and therefore offers a completely sealed reel body thanks to the Mag Seal mechanism, which prevents the penetration of particles and salt crystals completely. The life span and running smoothness of the gear therefore are considerably increased. The perfect reel for frequent usage and for fishing in the Baltic Sea for sea trout, perch and pike.

FREAMS A

With the FREAMS A the DAIWA engineers succeeded in integrating the innovative MAG SEALED technology in a cheap price range. The MAG SEALED construction in combination with the aluminum reel body ensures a permanently soft and smooth running and an optimal fixation of the gear – due to the sealing of the axis, no water or dirt can reach the gear – thus the lifespan of your reel, especially when fishing in saltwater, is extended distinctly. The UTB drag system works smoothly and cares for optimal safety during the fight with the fish, especially when thin braided lines are used. With the FREAMS A you get a real high-tech reel according to Japanese standards with a great price-performance ratio.

MATCH WINNER QDA

The new MATCH WINNER series has especially been developed for match- and feeder fishing. The ABS spool with large diameter in combination with the Twist Buster II line roller enable greater casting distances and reduce line tangling. The semi-plane 3012 and 4012 spools are perfectly made for application of thin mono or braided lines. The cross wrap line lay ensures perfect winding even with extremely thin braided lines and reduces the threat of tanglings during the cast. The spring-borne High Impact line clip reliably shields the clipped line during the cast and the fight with the fish.

The 4012 version has especially been developed for the tough demands at feeder fishing – the strong axis and the milled gear easily withstand the strains of heavy feeders – the large spool diameter optimizes the line retraction.

- ▶ HardBody-Z aluminum reel body
- ▶ Air rotor
- ▶ High Impact Protection line clip (HIP)
- ▶ Quick Drag System (QD)
- ▶ 8 Ball bearings (incl. 2 „CRBB“)
- ▶ DigiGear II
- ▶ Cross-Wrap line laying system

Big Pit Free Spool Reel

WINDCAST-BR LD

Big PIT baitrunner reel from DAIWA within the mid-range price segment. The new WINDCAST BR LD is based on the same construction principle as the legendary INFINITY BR – but has been adapted technically to modern standards. The reel body's size and its weight have been reduced to a minimum. The gear translation of 4.6:1 in connection with the large spool diameter enables a high line retraction of about 90cm! We are sure: this reel will cut a dash within the carp fishing scene – and all that at an excellent price-performance-ratio.

- ▶ 4 Ball bearings
- ▶ AirBail®
- ▶ DigiGear
- ▶ GyroSpin

- ▶ AirBail® (Patent-Nr. EP1038437B1)
- ▶ Twist Buster® II Line roller (Patent-Nr. EP0876760B1)

CROSSCAST-BR LD

The affordable version of the WINDCAST BR LD. As well as the WINDCAST BR LD, also the new CROSSCAST BR LD is based on the legendary INFINITY BR - a Big Pit reel with an enormous line capacity for carp anglers. The transmission of 4.6:1 in combination with the large spool diameter enables a retraction of 100cm - perfect when fishing over long distances! The extra strong shaft withstands even highest strains during the fight with the fish.

- ▶ Twist Buster® II Line roller (Patent-Nr. EP0876760B1)

NEW

CAST'IZM 25QDA

With this longcast reel, DAIWA breaks new ground. The newly developed 25mm stroke spool in combination with the large spool diameter enable the construction of a small and compact body in combination with a long spool – like this you get the function of a classical Big Pit reel combined with a considerably smaller and more lightweight reel body. The spool diameter has been optimized by our engineers to ensure minimal line friction at casting. Additionally, the spool cone has been designed in a way, which reduces the threat of tanglings at casting. Out test anglers from TEAM KORDA have conducted numerous casting tests during the developmental stage, which clearly indicated, that the casting range of the CAST'IZM 25QDA is almost identical to the ones of classical Big Pit reels. Therefore this reel is as well applicable for long-distance carp fishing as well as for feeder fishing or heavy spin fishing. The MAG SEALED mechanism cares for permanently smooth running.

The bail is turned by hand.

TOURNAMENT BASIAR Z QDA

The legendary BASIAR reel has been further evolved by our Japanese engineers – now featuring the MAG SEALED mechanism. The combination of Zaion and magnesium is the perfect basis for the construction of extremely lightweight but nevertheless strong and distortion proof reels. The MAG SEALED mechanism cares for a perfect sealing of the reel body via the axis. Since like this no dirt particles can enter the gear, a permanently soft and smooth running is guaranteed.

The bail is turned by hand.

▶ Twist Buster® II Line roller (Patent-Nr. EP0876760B1)

Big Pit Reel

With the WINDCAST series DAIWA offers 2 Big Pit reel models, which are applicable for surfcast and carp fishing. The extra strong axis and the Wormshaft guarantee a trouble-free fight with the fish even under harshest strains. The transmission of 4.9:1 provides a good force transmission and a long lifespan of the gear.

The bail is turned by hand.

WINDCAST Z

This is our WINDCAST top model. The QD-Drag is perfectly suited for all fishermen, targeting big specimen. With this special drag construction it is possible to assimilate within seconds due to changing fishing situations and changing currents in rivers. The sophisticated CNC-cut aluminium handle is also used for the BASIAIR. The HIP (High Impact) Line Clip shields the line and is ideally convenient to cast precisely to target feeding spots. The 5000LD (Long Distance) Model holds the same line capacity like a 6000 sized spool, but features the smaller and lighter body size.

- ▶ 8 „CRBB“ ball bearings
- ▶ Machined aluminum handle
- ▶ DigiGear
- ▶ WormShaft oscillation system
- ▶ GyroSpin
- ▶ Quick Drag System (QD)
- ▶ Infinite Anti-Reverse*
- ▶ Conical aluminum long distance cast spool
- ▶ Conical aluminum spare spool
- ▶ High Impact Protection line clip (HIP)
- ▶ Line Guard System
- ▶ CastLock System
- ▶ AirBail® made of stainless steel
- ▶ Twist Buster® II line roller
- ▶ Longlife bail spring

NEW EMBLEM SPOD

Due to frequent customer request, we now offer this legendary spod reel with a line retraction of 122cm/handle turn also in Germany. Extreme retrieving power excels this muscle man. The CastLock mechanism prevents unwanted turning of the bail during the cast. Two line clips at the spool enable easy handling and targeted casts to the spot. The strong Wormshaft gear easily withstands the heavy strains at using rocket feeders.

Super Autocast II System

- ▶ 4 Ball bearings (incl. 1 „CRBB“)
- ▶ Super AutoCast II System
- ▶ CastLock System
- ▶ WormShaft oscillation system
- ▶ ABS aluminum spool
- ▶ Twist Buster® line roller
- ▶ Both-sided line clips

CROSSCAST S

The DAIWA Big Pit reel with an incredible price-performance ratio. The Wormshaft gear ensures perfect line lay and an enormous retrieving power. Thanks to the gear ratio of 4.9:1 and the big spool diameter, this reel has a retrieval of 102cm! It is a perfect reel for carp and surfcast fishing.

The 5000LD (long distance) model has the same line capacity like a 6000 sized spool, but features a smaller and lighter body size.

SALTIGA

With the SALTIGA series DAIWA presents a masterpiece of Japanese reel engineering. Designed to withstand the harshest exposures at sea fishing.

The bail is turned by hand.

SALTIGA 4500 / 4500H

Designed to cope the harshest exposures like sea fishing for Amberjacks, Giant Travelleys and Yellow Fins, this reel is also perfectly appropriate for fishing halibuts and big cods in Norway or Iceland. The patented MAG SEALED mechanism ensures that no salt crystals can get into the gearing through the shaft. The gear is cut out of one piece by a CNC-machine. The Air Metal rotor reduces the reel's weight and provides a very well balanced smooth winding.

Thanks to the high gear ratio of model 4500H, the lure can be retrieved quickly and without bigger efforts - independent of the depth.

Art-No.	model	BB	ratio	m/ømm	retrieval	wt.		
10305-452	SG 4500	14	4.9:1	185/0.50	94cm	585g		
10305-453	SG 4500H	14	5.7:1	185/0.50	110cm	585g		

SALTIGA 3500 H

The new small size within our DAIWA SALTIGA series. All features and technical details correspond with the 4500 sized reel – only in a real SALTIGA 3500 version with a smaller and lighter reel body. Testing this new 3500 sized reel reel by fishing in the tropics as well as in the Baltic Sea has already shown what it is made of – perfectly suitable for light fishing and jigging for codfish and Pollack as well as for challenging fishing for pike in brackish water areas. The Bail is turned by hand. A highlight of modern reel construction.

Art-No.	model	BB	ratio	m/ømm	retrieval	wt.		
10305-352	3500 H	14	5.7:1	220/0.30	98cm	440g		

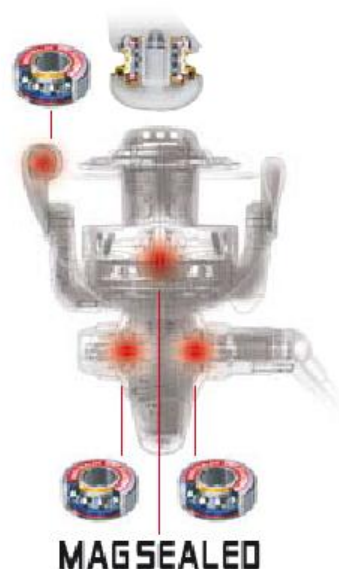

SALTIGA 6500 H

The 6500 sized SALTIGA has been developed especially for fishing for the extreme powerful fishes of the Pacific and the Atlantic Ocean. Due to the increasing popularity of spin fishing for catfish, this Big-Fish-Reel will also gain rising popularity in Europe. The 6500 sized SALTIGA has been constructed for extreme strains during the fight with the fish – the maximum drag power of 30kg can hardly be managed permanently by human muscle strength and facilitates the controlling of the fish even under extreme conditions. The line retraction of 130cm per handle turn ensures a wide range of application: From Speed Jigging to spin fishing for catfish. The bail is turned by hand.

NEW

SALTIGA EXPEDITION

The new SALTIGA EXPEDITION is equipped with the latest technical developments made in Japan. The handle shaft is completely isolated via two MAG SEALED ball bearings at both sides – no saltwater can intrude into the gear via the axis – the lifespan of your gear thus is optimized distinctly – the appearance of salt crystals is eliminated during normal usage. The Hyper DigiGear drive pinion is CNC-milled out of one block and withstands also highest strains of sea fishing. The drag knob of the SALTIGA Expedition series is made of a special metal composite material which channels off heat and thus protects the drag from getting overheated during the fight with the fish.

The size 5500 with 15kg drag power is perfectly suited for heavy jigging for halibut and cod in Norway, as well as for light fishing for amberjack, GT etc. in the tropics.

The Size 8000 has especially been constructed for extreme fishing for yellow Fin, GT and amberjack, where beyond extreme drag power (30kg) also great line capacity is needed.

SALTIGA 7000H DOG FIGHT

The name DOG FIGHT is already a synonym for ones who challenge the giants of the sea. Regardless if tuna, tarpon, GT or even marlin - the SALTIGA DOG FIGHT will defeat them. The 7000 sized model features an even larger line capacity than the previous model - perfect for fishing with heavy poppers or jigging with thick braided lines. The Hyper DigiGear is cut in a very complex procedure and resists also highest strains at the tropics. Similarly to the other SALTIGAS, this reel's body is also sealed with the MAG SEAL mechanism. The perfect reel for everyone who wants to challenge the giants of the sea.

HYPER TANACOM S

Electronic reel with 12V power engine for fishing in Norway. The gear ratio is 3.6:1. The winding speed is about 160m/minute unloaded. Features an electronic line counter, which indicates "meter". Can be used manually and electronically. Supplied with electric cable.

- ▶ 2 Ball bearings
- ▶ Washable construction
- ▶ Electronic line counter (in meter)
- ▶ One-piece power body
- ▶ Large power handle knob
- ▶ Power Lever
- ▶ Super power gear wheels
- ▶ UTD Drag System, waterproof
- ▶ Star drag
- ▶ Aluminum spool
- ▶ Supplied with cable

UTD Drag

Line capacity braided lines: 40lb-470m / 50lb-350m / 60lb-300m
 Line capacity monofilament lines: 0.50mm-230m / 0.55mm-190m

Art-No.	model	BB	ratio	m/ømm	wt.		
10806-500	TCS 500	2	3.6:1	2300.50	670g		

Multiplier Reel

- ▶ CNC cut housing
- ▶ CNC cut massive stainless gear
- ▶ 2-gear transmission
- ▶ UTD Drag System
- ▶ Carbon fiber drag discs
- ▶ Drag system with click-sound
- ▶ CNC cut spool
- ▶ 6 „CRBB“ ball bearings
- ▶ Extra large power handle knob
- ▶ Centrifugal drag system
- ▶ Aluminum rod clamp

SALTIGA 2SPD LD

With the SALTIGA 2SPD LD you are well equipped for all seas – Regardless if Halibut and Co. in the northern seas or Amberjack, GT and doggies in the tropics. The body of the SALTIGA 2SPD LD is completely cut from one aluminum piece and withstands also highest strains. The lever drag can be adjusted in 10 steps very easily and fast. The 2-gear transmission enables a fast lure control and different styles at lure presentation.

UTD Drag

Art-No.	model	BB	ratio	m/mm	retrieval	wt.

UTD Drag

Multiplier Reel

SEALINE ISHIDAI

The multiplier reel with digital depth counter! This reel shows its whole power especially during tough fights with halibut and coalfish in Norway – due to its digital depth counter, you can present the lure with the optimal distance to the ground - an invaluable benefit when coalfish predate in the middle water and you need to provide your lure constantly at the same depth! Thanks to its great gear transmission and its strong Power-Gear you can retrieve your lure for a check at the surface quickly and effortless – you retrieve 120cm per handle turn! Due to its special construction, this reel is additionally very lightweight and allows enduring effortless fishing. The maximum drag power of 13kg offers more than enough power to fight even with strong fish.

- ▶ Digital depth counter
- ▶ Star drag with click-system
- ▶ Sealed drag system
- ▶ Infinite Anti-Reverse®
- ▶ 7 „CRBB“ ball bearings
- ▶ Aluminum handle
- ▶ Power handle knob
- ▶ Gear ratio 6.4:1
- ▶ Ratch drag
- ▶ CNC cut aluminum spool

Art-No.	model	BB	ratio	m/ømm	retrieval	wt.

**NEW**

RYOGA BJ C2025PE-SHL

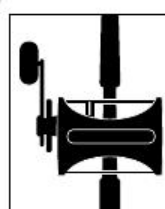

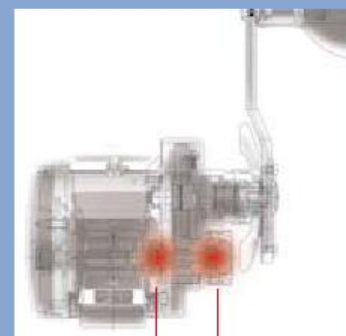

The new RYOGA BayJigger doesn't leave any wishes unfulfilled – this small multiplier reel has especially been built for light sea fishing for coalfish, pollack and cod. The gear is aluminum-cut and totally distortion proof. The new MAG SEALED ball bearings seal the axis from the spool – no saltwater can infiltrate and thus no salt crystals remain at the gear. The Power-handle knob made of EVA material and the strong traction wheel form a perfect alliance, which helps you to direct every fish effortless to the surface during the fight. The high transmission rate is perfectly made for Speed-jigging with pirks of 80g-150g for coalfish and pollack. Ideal in water depth of 20-60m in combination with a thin braided line. The spool has a line capacity of about 220m/0.20mm TOURNAMENT 8BRAID.

Baitcasting Reel

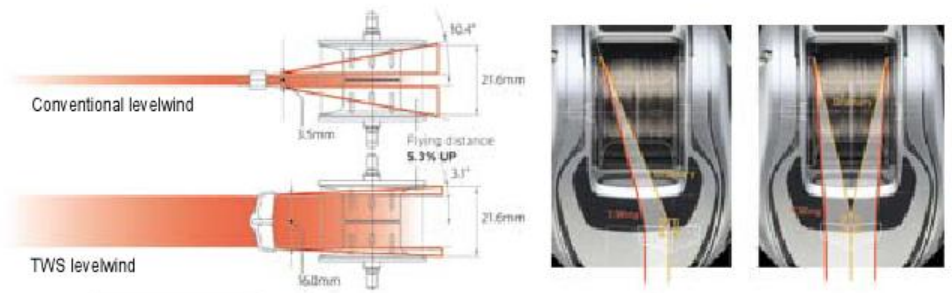

BAITCAST REELS

TWS T-Wing System

DAIWA's T-WING system solves an age old problem with baitcasting reel levelwind systems. The „T“ aperture allows line to flow freely through the wide top section on outcast, reducing the normally sharp angles, and friction that slow line flowing through a narrow aperture when exiting the reel. For retrieve line drops in the narrow, lower channel of the „T-WING“ for even distribution across the spool width.

With ordinary levelwind reels, line coming of the spool ends is forced through the line guide at a sharp angle. The result is casting friction, especially when the line guide is parked on one side of the reel. The T-Wing's wider aperture means reduced angles and less line friction from any position.

U.T. Drag

The Ultimate Tournament Drag ensures a perfect interaction between drag control, drag power and super-soft drawing of the line.

MAGFORCE Mag Force V / Z

Highly precise casting control system, which prevents tanglings. It controls the centrifugal force of the spool during the first half of the cast, when the threat of tanglings is very high. Afterwards it reduces the resistance automatically and therefore enables longer casts, since less drag pressure is exerted at the spool.

Speed Shaft

Thanks to a special construction and the targeted use of ball bearings the turn resistance of the spool is drastically reduced. Longer casts are the consequence.

DIGIGEAR

CNC-milled digitally developed power gear for highest strains. The precision of the gear teeth is tenfold elevated compared to conventional gears.

AIRMETAL

The frame and the lateral parts, which bear the gear are made of Air Metal magnesium, which leads to highest stability and distortion-proofness at a low weight.

Click system star drag

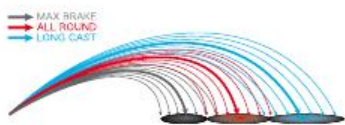

There is hardly any better sound than the delicate and precise click sound of a turning spool, when a fish takes line during the fight with the fish. The DAIWA system represents the perfect solution and is designed in a way, which doesn't impair the casting performance.

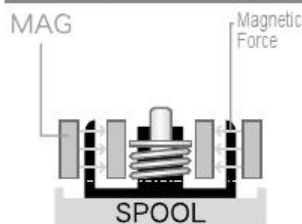

MAGFORCE 3D Mag Force 3D

The MAGFORCE 3D system offers you the choice, how far the magnets are placed from the spool, therefore adjusting the drag strength. By the switch you can adjust the drag in 3 steps.

MAX BRAKE
ALL-ROUND
LONG CAST

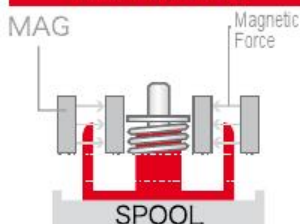

MAX BRAKE

MAX BRAKE - Provides maximum magnetic braking – very helpful when casting into a wind or with big wind-resistant baits.

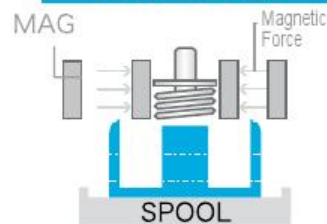

ALL ROUND

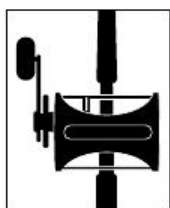

ALL-ROUND - Slightly reducing the inductor cup's movement into the magnetic field provides a reduced braking action at maximum speed. Perfect all-round setting for most applications.

LONG CAST

LONG CAST - The magnets move the furthest distance from the inductor, so magnetic braking is minimized for maximum spool speed – great for longer distance.

Left hand version

DAIWA-Z 2020HL

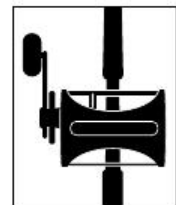

With the Z 2020 HL DAIWA offers a Baitcast-reel „made in Japan“ with great line capacity. Consequently this reel is also suitable for usage with thick braided lines, heavy lures or even for jerkbaiting with lures up to 80g. At this reel power and durability have priority. The different setting options of our newly developed MagForce 3D magnetic drag system enable to adapt perfectly to the prevalent conditions as for example crosswind, headwind, light lure weight etc. The MagForce 3D System contains 60 different drag settings to adjust to nearly every fishing and lure situation.

TEAM DAIWA PLUTON

The TD PLUTON 200SHL is an outstanding round shape multiplier reel, made in Japan under highest quality standards, that fulfills all your demands.

A size 200 is perfectly suited for jerking with thick braided lines and for trolling for pike, zander & Co. The body is machine cut from one solid aluminium block and guarantees stressless fishing.

TEAM DAIWA ZILLION

The baitcast reel from the US range with a super high gear ratio. It can unfold its power in high-speed situations best. We are sure - this Japan-made model will please every single Baitcast angler – especially due to its 82cm line retrieval! Due to its solid structure and the greater line capacity, this reel is also suitable for jerkbait fishing.

- ▶ 11 Ball bearings
- ▶ High speed gear ratio 7.3:1
- ▶ HardBody-Z aluminum reel body
- ▶ Aluminum spool
- ▶ Carbon fiber handle
- ▶ Soft-Touch handle knobs
- ▶ UTD Drag System
- ▶ MagForce-Z magnet drag system
- ▶ Precision ratched swept star drag
- ▶ Infinite Anti-Reverse®
- ▶ Free spool mechanism with click-sound
- ▶ Left hand version
- ▶ Made in Japan

HardBodyZ
Light & Rigid Metal Construction
MAGFORCE

LIBERTO PIXY

This is the new baitcast top model from Japan, which has also gained great success on the Japanese market within short time. With its super-light magnesium-alloy body, this reel is one of the most lightweight baitcast reels all over the world – it weighs only 160g. The gear ratio of 6.8:1 enables the fisherman to use every state of the art lure technique. The MagForce-Z drag system can be set at zero completely and enables enormous casting distances for skilful fisherman.

Due to the perfectly adjustable freespool mechanism, the PIXY 68L is excellently appropriate for fishing with small and very small plastic lures from 5g, which usually cause problems with most of the available baitcast reels on the market.

- ▶ 8 Ball Bearings
- ▶ High speed gear ratio 6.8:1

 T-Wing System

Left hand version

TATULA

With the TATULA baitcast reel DAIWA further continues the development of the T-Wing System (TWS). The new TWS thereby increases the casting performance compared to conventional baitcast reels about up to 10%. This is due to the reduced line friction during the cast, since the line exits the reel at a considerable larger angle, which causes less friction. At retrieving, the T-construction is folded into the reel body and the line is guided over the conventional levelwind system. This new generation of the T-Wing System caused huge sensations among the scene at its introduction at the ICAST 2013 in the USA. Additionally the spool of the TATULA runs extremely smooth and enables great casting distances. Also the further equipment is extraordinary for a baitcast reel within this price segment and convinces with many more elucidated details – focusing on the new Air Rotation System, where the gear is hardly noticeable at retrieving the bait.

Art-No.	model	BB	ratio	m/ømm	retrieval	wt.
10710-210	100HSL	7	7.3:1	135/0.32	77cm	225g

TATULA 100XSL Type R **NEW**

The new super high speed model with 8.1:1 transmission and TWS system. Due to the high transmission rate you get a line retrieval of 86cm per handle rotation and thus can provide your lure with a new way of presentation.

Art-No.	model	BB	ratio	m/ømm	retrieval	wt.
10710-211	100XSL	7	8.1:1	135/0.32	86cm	220g

TATULA 200HSL **NEW**

The TATULA 200HSL has been developed according to the need for a greater line capacity – the TATULA 200SHL has the same body size as the 100SHL model, but can hold much more line due to the deep spool – ideal for crankbait fishing with thick, braided lines. The TWS-system enhances the casting distances compared to usual baitcast reels up to 10%. The Air Rotation gear is hardly perceptible during retrieving and ensures an extremely soft running of the spool.

LEXA HSL

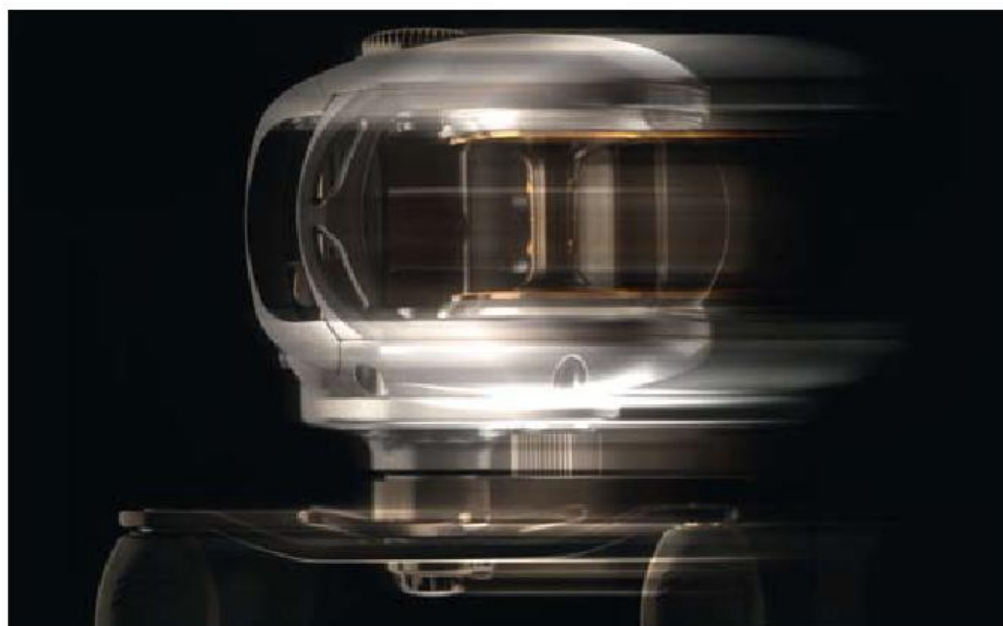

Fishing with multiplier and baitcast reels is trendy – recently especially models with high line capacity and a small and lightweight body at the same time for the light fishing for catfish, coalfish, halibut and tropical fishes like amberjack, travalleys, mahimahi etc. have been demanded. The LEXA baitcast reels exactly offer the matching models for the abovementioned requirements. The body size of a 300sized LEXA corresponds to the size of a normal baitcast reel – but offers the tremendous line capacity of 220m 40lbs (ca. 0.23mm) braided line. The 400sized reel offers a slightly larger body and is perfectly usable for medium heavy spin fishing for catfish, halibut and coalfish. Thanks to its line capacity of 220m 0.40mm mono line or 350m 0.23 braid it belongs to the largest baitcast reels currently available. The maximal drag power of the 400sized model is about imposing 11kg!

Baitcasting Reel

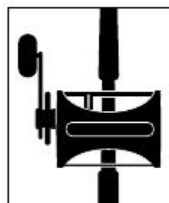

DAIWA REEL TECHNOLOGY
TWITCHIN'BAR SYSTEM

DAIWA baitcasting reels with TwitchIn'Bar System are especially developed for fishing for zander, perch and pike. Ideal for vertical and jerkbait fishing. With this system you fish

comfortable with only one hand – just tip the TwitchIn'Bar lever shortly with the thumb and the reel winds the bait about 15cm or winds loose line, immediately after the bait is touching the ground. Being alone on the boat, you now can retrieve the bait at the same time while steering the boat. An incomparable advantage towards bait casting reels without TwitchIn'Bar.

VIENTO L

The globally successful TwitchIn'Bar reel in a new design and with newly designed handle! The combination of a premium baitcast reel with our patented TwitchIn'Bar system makes this reel unique. The Speed-Shaft System in combination with the finely adjustable magnet drag guarantees long casts. The MagForce System additionally prevents line tanglings during the cast. The TwitchIn'Bar makes this reel an indispensable tool for anglers, especially at vertical fishing.

MEGAFORCE 100 THSL

The upgrade of our popular Twitching Bar reel with improved functions. The high gear ratio of 7.1:1 enables a line retraction of about 80cm per handle turn and therefore facilitates to give the lure a broad range of different actions. The milled brass gear offers the necessary safeness and reliability also under frequent usage. The MagForce-Z magnetic braking system can be deactivated completely to optimize the casting distance.

THE DAIWA ROD RANGE 2015

DAIWA

RODS

CARBON FIBER MATERIALS

The used carbon fiber material has the greatest impact on the quality of a fishing rod. We at DAIWA permanently seek to enhance the carbon fiber content and to reduce the resin percentage. According to the slogan: more muscles, less fat. This is our way to construct continuously improved rods.

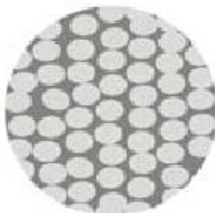

Z-SVF Carbon fiber

Z-SVF is the most lightweight carbon fiber material DAIWA has ever applied. This material can only be used for a few rods, since it is very expensive and very complicated in the blank manufacturing process.

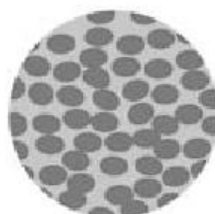

Super SVF Carbon fiber

The resin content is reduced to a minimum, high modulus carbon fibers are used. Since this material is very expensive, it is only used for our top rods. Extreme lightweightness and an ultra fast action are the characteristics, which qualify rods made of SUPER SVF.

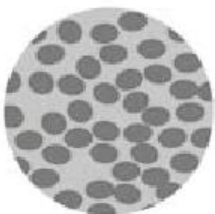

SVF Carbon fiber

In contrast to HVF carbon fiber rods SVF carbon fiber rods are more sensitive and light weight, since they feature less resin content. The action is ultra fast and the notorious torque is reduced to a minimum.

HVF Carbon fiber

In contrast to normal carbon fiber rods with high resin content in the space between the carbon fibers DAIWA HVF rods are made of a carbon fiber compound with less resin, called HVF - since resin has a high weight, rods made of HVF are more condensed, more light weight and feature a faster action.

Usual "Pre Preg" carbon fiber

At standard carbon fiber materials the resin content is very high, while the number of carbon fibers is low. Rods made of this material are heavier and not that well balanced and feature a slower action than our HVF and SVF rods.

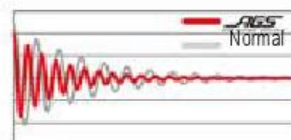

AGS AIR GUIDE SYSTEM

With the new AGS guides (AGS= Air Guide System) DAIWA presents an innovation, which heralds a new era of rod construction technology. The AGS guides have a carbon fibre frame and therefore are considerably more lightweight as for instance a FUJI Titanium guide, which was,

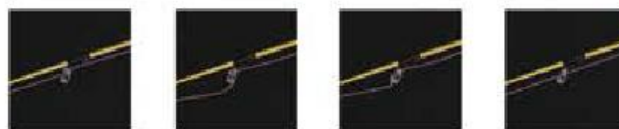

up to now one of the world's most lightweight guides. The reduced weight optimizes the rod action - the rod gets essentially faster and resiles clearly faster. Additionally the use of carbon fiber framed guides reduces vibration of the guides during the cast - more precise casts are the consequence. Whoever takes a rod with AGS guides in the hand will realize immediately the dramatic difference to conventional guides and actions.

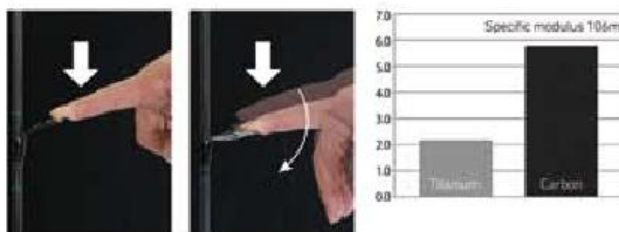

Thanks to AGS the tip resiles faster.

Compared to conventional guides the use of AGS guides results in a weight saving of up to 40%. This implies less strain for the blank and results in a clearly improved resilience.

The frame construction reduces the threat of tanglings. Especially at headwind and the use of braided lines the threat of losing lures due to tanglings at the guides is high. AGS guides enable an "escape" of the line at tanglings without knots or loss of the lure.

Comparison of the stiffness of carbon and titanium: Carbon features an approximately 3-fold stiffness compared to titanium and therefore is the ideal material for guide construction - the carbon frames of the AGS guide support the sensitivity of the blank like no other material.

3DX

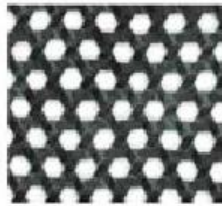

30 CROSS

3DX carbon fiber

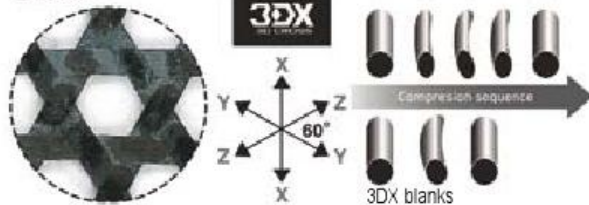

In contrast to conventional carbon fibers, where the fabric structure always is 2-dimensional oriented, DAIWA has developed a 3-dimensional carbon fiber material.

The interwoven 3DX carbon fibers are integrated into the blank during manufacturing. This "skeleton" enhances the compression, improves the flexural strength and makes the blank faster.

3DX

Thanks to the new 3DX carbon fiber material, the blank compression is considerably improved. The rod features always the same power transmission – regardless the direction of movement. Additionally the rod features obviously reduced torque – more precise casts are the consequence

The hexagonal pattern is widely distributed in nature and has ever been the basis for substantial technical innovations.

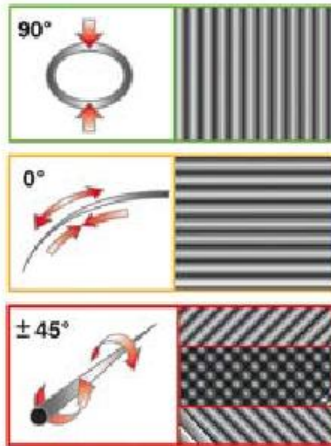

V-JOINT

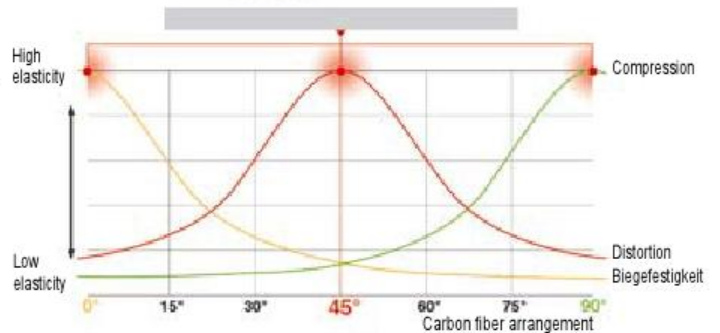

V-Joint is a special spigot joint, where the spigot and the blank around the spigot are made of a special, exclusively for DAIWA made BIAS carbon fiber material. The carbon fibers follow a 45-degree angle. The consequence is higher strain resistance and an improved bending curve.

X45

Special carbon fiber material for the improvement of the torsion-resistance. Conventional carbon fibers are always layered in a 90° angle - the new X45 material features a 45° angle and is combined with 0° and 90° layered carbon fibers. This construction makes the rods stronger and more distortion-proof.

Despite the increased distortion-proofness the flexibility is maintained. This implies that X45 rods are not only stronger and cast more precisely, but also support the angler at the presentation of delicate lures and at ending the fight with the fish safely.

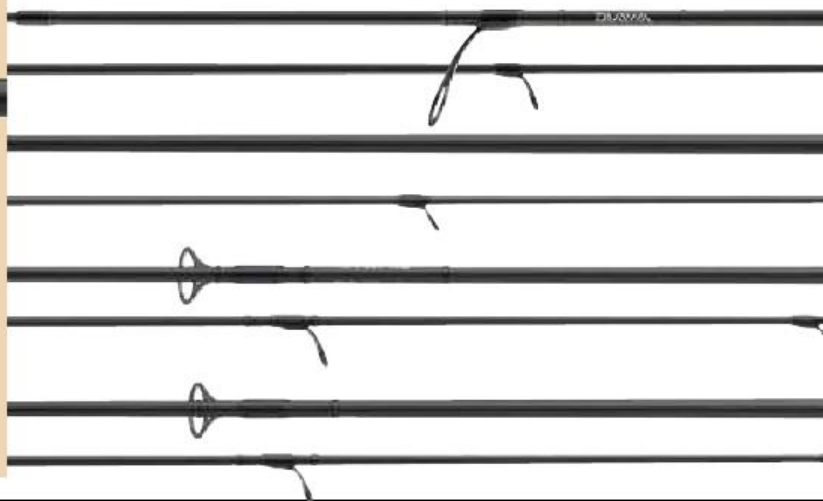

X45 offers the perfect balance of strength, control and elasticity

- ▶ Super multi taper – depending on the strain the whole blank absorbs flights and pressure from the tip to the handle
- ▶ SUPER SVF-COMPILE-X carbon fiber – the maximum carbon fiber amount provides a fast action and super light weight
- ▶ V-Joint connection – an absolute harmonic bending curve enables an action like a one-piece rod
- ▶ Micro-Pitch Taping – extreme tight woven carbon fiber mats provide maximal blankpower. All blanks are not sanded.
- ▶ AGS carbon fiber rings – extreme lightweight and distortion proof
- ▶ Double wrapped guides for maximal lifespan
- ▶ Japanese Hard-EVA handle
- ▶ Made in Japan

MORETHAN BRANZINO AGS

With the BRANZINO AGS rods DAIWA presents another milestone of rod engineering. Via the combination of SUPER SVF-COMPILE-X carbon fiber material with the ultra-lightweight AGS carbon fiber guides, the construction of extreme fast and distortion proof rods with no torque has become achievable. Extreme long and precise casts are the consequence. Depending on the model the BRANZINO AGS rods are ideally suitable for wade fishing for seatrout und for fishing with small plugs und plastic lures for zander, asp and pike.

902MH-AD SHADSHAKER II

Thanks to the great demand for a MORETHAN BRANZINO AGS version with a higher casting weight, we and our japan engineers in Tokyo developed a version which is made for medium sized soft plastic lures for fishing for pike and zander. The use of SVF COMPILE-X™ carbon fiber material in connection with the exclusive DAIWA AGS carbon fiber rings enables the construction of an incredible light and fast rod - you probably won't find this quality and these features anywhere else. An exceptional feeling in combination with best components - made by DAIWA! This rod is manufactured in Japan to 100%.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11105-271	2.70m	20-60g	143cm	2	140g	8

97LML

A lightweight for heavy boys – one could label the 97LML like this. The Super SVF COMPILE-X carbon fiber material in combination with the new DAIWA AGS carbon fiber single leg guides enables the construction of extreme lightweight and fast rods – the 97LML weights only 125g at a length of barely 3m – another milestone within DAIWA's rod construction technology.

Perfect for fishing for seatrouts with light spoons of 15-20g and for zanders with small plugs or soft plastic lures.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11105-292	2.90m	5-28g	150cm	2	125g	9

97ML DEMON WADING CUSTOM

This rod combines power and sensitivity. The somewhat shorter handle section cares for a better control during wading – perfect when you are wading in deep water.

The strong backbone ensures an optimal bite yield and also absolute control during the fight with big fish. Perfect for fishing for seatrouts. The AGS guides provide an extreme fast action and optimize the casting accuracy. You probably won't find a faster rod at the market.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11105-293	2.90m	7-35g	150cm	2	130g	9

87ML URBAN SIDE CUSTOM

The Urban Side Custom 87ML has been developed especially for situations in which extraneous conditions complicate the cast – for example heavy vegetation at the water or buildings. In such situation it is particularly important to use a handy rod, which enables to perform different casting techniques (Overhead cast, Underhand cast, Sidearm cast) easily and accurately. An additional feature of this rod is its so called "Index Finger Ring", which is mounted above the reel seat in a way, which makes it possible to feel every vibration of the lure and the blank with the forefinger. The AGS carbon fibre guides make this rod a real precision- and long casting tool.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11105-261	2.60m	7-30g	135cm	2	135g	8

89.5MML FINGER TIP CUSTOM

The name says it all – the finger Tip Custom 89.5ML combines a strong handle section with great power reserves with a very sensitive and extremely fast tip section. The almost unbreakable MEGATOP full carbon fiber tip offers the required sensitivity to realize even softest touches. At the same time it also offers enough power reserves to land also big fish safely.

The ultra-light AGS single leg guides with carbon fiber frame ensure an until now unknown unique feeling within the rod. The flattened handle section cares for secure grip at the arm and enduring effortless fishing.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11105-268	2.65m	7-35g	138cm	2	135g	9

1010MML SURF GAME POWER CUSTOM

The long casting miracle within the DAIWA MORETHAN BRANZINO AGS series. A sensitive tip section coupled with a strong handle section provides enormous casting distances with lures of 15-25g. Due to the usage of SUPER SVF-COMPILE-X carbon fiber material in combination with our ultra-light AGS carbon fiber guides, we were able to build a rod which has an extra fast action and is also able to fight with powerful fishes in a secure and uncompromising way.

TOURNAMENT AGS

With the TOURNAMENT AGS rods, DAIWA presents a small series of premium spinning rods equipped with the incredible lightweight DAIWA AGS carbon fiber guides. The action of the TOURNAMENT AGS rods is extremely fast and the rods are very stiff – therefore the TOURNAMENT AGS rods are perfectly suited for medium heavy fishing with shads for pike, zander and perch. These rods transmit every lure movement and floor conditions to the angler instantaneously. Thanks to the stiff action, these rods are also usable for twitching with plugs and surface lures. The application of HVF carbon fiber in combination with the X45 carbon fiber texture enabled the construction of incredible lightweight and distortion proof blanks with high resilience. Depending on the length, the rods weigh only about incredible 138g to 166g! By layering the carbon fibers in a 45° angle, the X45 construction reduces the threat of rod damages. The usage of the AGS guides optimizes the rod balance and considerably contributes to the fast action of the TOURNAMENT AGS.

SHOGUN

The name SHOGUN stands for premium and high-end spinning rods "made in Scotland" for 15 years now. Now we redesigned all blanks in cooperation with our DAIWA rod engineers in Scotland, and adjusted them to the actual requirements and standards concerning action and equipment. Thus you get a well balanced series of spinning rods for special demands.

SHOGUN 24LS / 27LS & 24MLS / 27MLS (7-28G / 8-35G)

Classic jigger rod with distinctive tip action and single leg guides. Perfect for spinfishing with small to medium lures for bass, zander and trout. Thanks to the Micro-Pitch procedure at the tip, these rods are extremely fast and enable instant hooking. Ideally suitable for small soft plastic lures, twisters, plugs and spoons.

24MHS / 27MHS (20-50G) & SHOGUN 24XHS / 27XHS (50-100G)

Due to frequent customer requests, the premium "made in Scotland" soft lure rod series has been extended by two additional models of 2.4m length – perfect for fishing from the boat. The action has been designed extra stiff, which enables the angler to present the lure lifelike and to set the hook instantaneously even over long distances. Thanks to a special micro-pitch procedure used for the tip, the rods are extremely fast and feature an astonishing handling. The 20-50g models are designed for fishing for zander with shads from 8cm to 15cm. The somewhat stronger 40-100g models are made for fishing with shads from 12cm to 20cm – literally made for pike fishing with large lures at the Bodden. Equipped with FUJI®-K double leg starter guide and single leg guides.

SHOGUN 32 MHS (15-50G)

This rod with a casting weight of 15-50g is a classic seatrout rod with semi-parabolic action. This rod fully loads with lures of 20-30g and thus enables extreme casting distances. Thanks to the continuous action, this rod is ideally suitable for the use of braided lines – the rod buffers strong headshakes and flights perfectly. Equipped with double leg starter guide and single leg guides.

TOURNAMENT SPINNING

With the TOURNAMENT spinning rods we offer a well-balanced range of high quality premium spinning rods. The combination of our exclusive DAIWA 3DX carbon fiber material with Super SVF graphite is really made for the construction of light and simultaneously stiff blanks for fishing with soft plastic lures. Depending on the casting weight, you can apply this rod for nearly all kind of fishing with soft plastic lures. Only the best components are good enough for our TOURNAMENT rods. For a safe transportation, we deliver the rods with a semi-hardcase cloth bag. TOURNAMENT – a synonym for quality and performance – made by DAIWA. The Jigger rods have a distinct tip action and are equipped with single leg guides.

POWERMESH LURE

Modern lure fishing with short and hard rods is getting increasingly popular. With the new POWERMESH® series we offer you a range of premium and very lightweight rods made from best components, which were especially composed for particular fields of application.

POWERMESH BAITCAST 7-28G

Classic baitcast rod with stiff action for twitching of hardbaits and fishing with the Wacky-, Carolina-, or Texas-rig. The action enables the application of nearly all modern kinds of lure presentation. Perfect for plugs from 7cm to 12cm. The blank quality and equipment is extraordinary for this price-range. This model is equipped with a trigger reel seat and is designed for use with a multiplier reel.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11916-196	1.95m	7-28g	105cm	2	122g	9

POWERMESH BAITCAST 10-35G

The POWERMESH® Baitcast 10-35g has been particularly designed for an aggressive and active lure presentation. This stiff rod is especially applicable for twitching of small to medium plugs from 7-15cm. This model is equipped with a trigger reel seat and is designed for use with a multiplier reel. The equal blank division facilitates transportation in the car.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11916-201	2.00m	10-35g	108cm	2	124g	9

POWERMESH JERK

Due to its short length of 1.65m this classic jerkbait rod is very well applicable for fishing in heavily vegetated areas and from the boat. This model is equipped with a trigger reel seat and is designed for use with a multiplier reel.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11916-165	1.65m	60-120g	167cm	1	140g	8

POWERMESH SPIN 3-10G

This one-piece rod has been specially developed for finesse-fishing with smallest lures. Despite the small casting weight, this rod features a comparatively stiff action and is ideally suited for fishing with small jigs and shads. The fight with smaller perchs, trouts etc. is a real high-light with this rod. Equipped with FUJI® Alconite single leg guides.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11917-185	1.85m	3-10g	185cm	1	126g	7

POWERMESH SPIN 5-14G

The POWERMESH® 5-14g is ideally applicable for fishing with small shads from 5 to 10cm, but is also the perfect choice for fishing with spoons, small spinners etc. The comparatively stiff blank transfers every rod movement immediately to the lure. The rod loads even with lightweight lures and enables long casting distances. A fantastic rod for fishing for perch and trout. Equipped with FUJI® Alconite single leg guides.

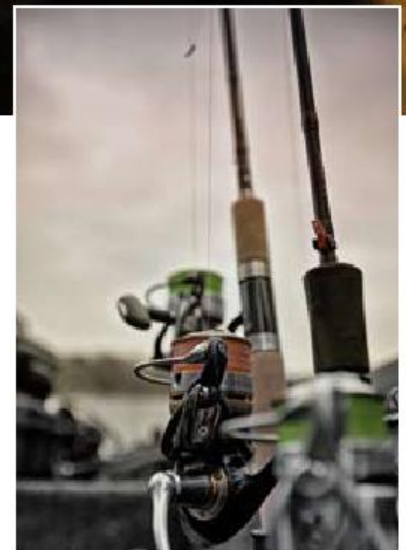

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11917-198	1.98m	5-14g	103cm	2	134g	8

POWERMESH SPIN 7-28G

The POWERMESH® Spin 7-28g is perfectly applicable for twitching with the spinning reel. The stiff action supports the full repertoire of different presentation styles. Perfect for plugs from 7-12cm. Equipped with FUJI® Alconite single leg guides.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11917-210	2.10m	7-28g	112cm	2	144g	9

GENERATION BLACK

GENERATION BLACK stands for a series of baitcast and special rods, which are constructed for specialized fishing methods with baitcast reels, ultra-light lures and small shads. Every rod has been especially optimized in its action and equipment for the corresponding application.

SHAD CASTER 692 MHFS

The SHAD CASTER is the ideal rod for small soft plastic lures and jigs of 5-10cm. The stiff action enables an optimal lure action and a perfect bite detection. The stiff action switches to a semi-parabolic bending curve during the fight with the fish – thus it can buffer the basses' and zander's headbutts perfectly. A real fun rod, which makes every fight with the fish an experience. The rod features an excellent handling. Equipped with extra light MINIMA® single leg guides, DAIWA reel seat and premium EVA-handle.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11914-205	2.06m	5-25g	107cm	2	130g	7

MINNOW DARTER 762 MHFB

This MINNOW DARTER 762 is made for fishing with small plugs – the relatively stiff rod has enough action to load during the cast with plugs of 7-10cm and thus reaching good casting distances. The length of 2.25m also enlarges casting distances. The MINNOW DARTER is suitable for all modern methods of lure action as twitching, Walk-the-Dog etc. Equipped with FUJI® Alconite guides, ergonomic DAIWA reel seat and premium EVA-handle.

11914-231	2.25m	7-28g	116cm	2	170g	10

CRAZY CRANKER 672 HRB

Due to the usage of DAIWA GLATECH material combined with carbon fiber, we were able to develop a very lightweight rod with a semi-parabolic action, which loads excellent during the cast and thus enables enormous distances.

This rod is constructed especially for fishing with medium and big Crank Baits – the soft blank supports the lure action because Crank Baits usually cause high pressure. Intense bites are hooked obviously better due to the semi-parabolic action. The single piece blank is stuck into the handle section. Featured with FUJI® Alconite guides, ergonomic DAIWA reel seat and premium EVA-handle.

VERTICAL ATTACKER

With the VERTICAL ATTACKER, DAIWA presents a premium vertical rod with high-class equipment. The very stiff and strong blank enables perfect lure control and allows scanning of the bottom structure due to the direct contact which also secures instantaneous hooking. The rod supports you during the fight with the fish and reduces dropouts caused by rough headshakes. Equipped with FUJI® Alconite guides, DAIWA ergonomic reel seat and premium EVA-handle. The version 11914-181 is provided with Trigger-reel seat for baitcast reels.

DROP SHOT FEELING

This rod with parabolic action is perfectly suited to set the hook with a little delay at drop shot fishing. The parabolic action supports an unimpeded sucking of the lure and buffers all escapes and headshakes perfectly. Ideally suited for fishing for bass with light to medium-heavy equipment, when you are fishing predominantly in short distances. The DROP SHOT FEELING is also perfectly appropriate for fishing for trouts, if you need a soft rod. Equipped with FUJI® Alconite guides, DAIWA ergonomic reel seat and premium EVA handle. A real fun rod for small to medium fishes.

TEAM DAIWA LINEAR INTERLINE

Because Interline rods are again getting very popular within sea fishing, DAIWA newly presents an Interline rod which is up to Japanese standards for season 2011 – the TEAM DAIWA LINEAR® INTERLINE.

The construction of this freshwater spinning rod provides great advantages for fishing near to a more heavily vegetated riverside – you can stalk through bushes without your line getting stuck all the time. The bending curve of an Interline-rod is always commendable, since the oppressiveness is scattered over the whole blank.

This Interline rod hasn't to fear any comparisons with other rods regarding the casting distance – by applying the appropriate lure weight you can cast as far as with a guided rod. A special surface coating on the inside of the blank reliably prevents dirt collections. The rod can be cleaned easily after fishing in very dirty water: just put it under running water and no residuals will remain within the blank. Due to the guideless construction, the action is very fast and you will have much fun fighting with the fish. This rod is perfectly suitable for fishing with soft-plastic lures, plugs and spoons.

- ▶ High Modulus carbon fibre blank
- ▶ Blank construction developed in Japan
- ▶ Original DAIWA LINEAR® Interline technology
- ▶ Original Daiwa reel seat
- ▶ Extra big Interline starter guide
- ▶ AAA cork handle

LINEAR INTERLINE

Special developed interline construction for casting rods. Thanks to the reduced line friction, extraordinary long casting distances can be obtained with this inner spiral construction.

- ▶ FUJI® Alconite guides
- ▶ FUJI® reel seat
- ▶ AAA-Quality cork handle
- ▶ Transportation holdall

FUJI reel seat

The R'NESSA spinning rods immediately have gained brilliant reputation within the scene – not to our surprise, since these rods combine actions particularly tuned to the according fishing technique with extremely lightweight blanks and premium features at an optimal price-performance ratio. The new R'NESSA series has been completely redesigned and now offers a larger model selection for nearly all kinds of spin fishing. The use of DAIWA's exclusive SVF™ carbon fiber material enables the design of extremely lightweight and stiff blanks, which offer pleasant handiness despite the slim blank diameter. By the use of 3DX carbon fiber material, the handle section has been drafted somewhat stiffer and stronger and features an astonishing appearance. The use of premium components like original FUJI® Alconite guides, a FUJI® reel seat, an AAA cork handle and a stressable holdall complete this exclusive series from DAIWA.

11852-195

11850-274

11851-240

R`NESSA ULTRA LIGHT SPIN

The perfect rods for finesse fishing for trout, perch and chub with a spinning rod and small lures. Thanks to the distinct tip action, the rod perfectly loads and casts even smallest lures to great distances. Equipped with FUJI® Alconite single leg guides.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides

11852-210	2.10m	3-15g	111cm	2	105g	7		

R`NESSA SPIN

The rods of the spinning rod series have especially been designed for fishing with softplastic lures. Strong and stiff rods with marked tip action provide the basis for this series. Due to the stiff action the lure can be controlled perfectly even over long distances. You easily can scan the bottom structure and set the hook even from remote. The models with 50-90gr and 70-120g are also very well applicable for light sea fishing for cod in the Baltic Sea.

R`NESSA SEA TROUT

Classical rods for fishing for sea trout. The blanks exhibit a semi-parabolic action and absorb shocks from fighting and jumping sea trouts easily. The very lightweight and well-balanced blanks enable permanent fatigue-proof fishing. Thanks to the soft tip, these rods are also perfectly applicable for the use of braided lines. The handle section of this 3.15m rod has been designed somewhat longer to provide a perfect lever for long casts.

FUJI reel seat

INFINITY Q SPINNING

We proudly present the 4th generation of our successful INFINITY Q series – we added several new lengths and casting weights, redeveloped all blanks and included many additional optical details within our new ININITY Q rods. Despite their light weight, the blanks always have enough power reserves for the fight with a big fish. Due to the special V-Joint spigot joint, the bending curve is very smooth and thus very similar to a one-piece rod.

The new INIFINITY Q rods are considerably more lightweight than their predecessors and have a faster as well as stiffer action.

INFINITY Q SPIN

You will immediately realize the big difference between these rods and their predecessors - the rods have been designed especially for fishing with softplastic lures and have a stiff action. Perfect for scanning the underground even over great distances. You can set the hook directly and during the fight with the fish the rod absorbs all headbutts and flights perfectly. Both versions with 2.4m and 30-70g or 50-90g casting weight are also ideally suited for fishing from the boat with shads. Depending on the version and casting weight, these rods are made for every kind of fishing with softplastic lures from 5cm to 23cm.

INFINITY Q ULTRA LIGHT SPIN

The perfect rod if you need to reach great casting distances at fishing for sea trouts with spoons between 25 and 35g. The rod fully loads over the whole blank and thus spoons of 30g can be cast over 70m! During the fight with the fish, the thin blank absorbs headbutts and flights perfectly and reduces unhooking, which is especially necessary when fishing with braided lines. This rod's handle has been chosen somewhat longer to ensure an optimal lever for enormous casts. Due to the combination of a soft tip with a strong backbone, this rod is perfectly made for the usage with thin braided lines.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides
11689-240	2.40m	1-9g	125cm	2	154g	8

INFINITY Q JIGGERSPIN

The INFINITY Q Jigger versions show a pronounced tip action and are ideally suited for fishing with small softplastic lures from 5-12cm, small plugs and twister as well as spoons up to 30g. The thin blanks are very lightweight and well balanced. The strong backbone offers enough power reserves to force the fight even with big fish. Perfect for perch, trout and zander. Equipped with FUJI® Alconite single leg guides.

11689-276	2.70m	8-35g	140cm	2	184g	9

INFINITY Q SEA TROUT

The ideal rod if you need to reach great casting distances at fishing for sea trouts with spoons between 25 and 35g. The rod fully loads over the whole blank and thus spoons of 30g can be cast over 70m! During the fight with the fish, the thin blank absorbs headbutts and flights perfectly and reduces unhooking, which is especially necessary when fishing with braided lines. This rod's handle has been chosen somewhat longer to ensure an optimal lever for enormous casts. Due to the combination of a soft tip with a strong backbone, this rod is perfectly made for the usage with thin braided lines.

LEXA

Ultra-lightweight blanks were the ultimate goal at the development of the new LEXA series. By application of premium carbon fiber mats with the highest carbon fiber percentage technically feasible, we succeeded in developing extremely lightweight rods, which were not available within this price range until now. For example the 2.70m version with a casting weight from 30-60g weights only incredible 160 gram! In addition the X45 construction contributes considerably to the fast action and the high resilience. The spin fishing models with a casting weight above 50g are designed comparatively stiff for fishing with shads, while the jigger-models feature a distinct tip action. To maximize the weight reduction, we didn't use any metal applications and cosmetic effects – at the LEXA the pure blank is emphasized. A classic design in combination with a slim handle made from premium natural cork completes the appearance of these exceptional rods.

NEW

PROCASTER SPINNING

The new PROCASTER spinning rods from DAIWA combine latest rod construction technology with appealing design and an astonishing price-performance ratio. This series covers nearly all fields of application at spin fishing – the tip action of the slim and lightweight high-modulus carbon fiber blank ensures optimal sensitivity and enables you to scan the bottom structure perfectly at fishing with softplastic lures and twisters. All blanks feature great power reserves at the handle section for the fight with capital fishes.

PROCASTER SPIN

Classical spinning rod with tip action. The models with a casting weight from 60g primary have been designed for fishing with shads and feature a rather stiff action. Equipped with aluminum-oxide double leg guides and premium cork handle. The rods with a casting weight up to 50g are equipped with single leg guides and feature a somewhat softer action than conventional soft lure rods.

MEGAFORCE TRAVEL **NEW**

Travel rods are trendy, since these multipiece rods offer the possibility to carry them along even on vacation, without the need for bulky and meanwhile also very expensive rod transportation tubes. Especially at the design of multipiece rods, the nowadays established rod construction technology enables the construction of multipiece rods, which feature a similar action to a 2-piece rod. The negative influence of the spigot joints on the action can be eliminated almost completely.

The MEGAFORCE TRAVEL series offers you a range of selected spin and jigging rods, which cover nearly the whole range of actions necessary for fishing in fresh and salt water. Thanks to the use of spigot joints, these rods feature a wonderful harmonic bending curve.

MEGAFORCE TRAVEL SPIN

Depending on the casting weight, here you find the matching model for trout, perch zander and pike.

LAGUNA

Lightweight and very well balanced rods for fishing for trout, tench, bream and co.

LAGUNA SPIN

Lightweight and very well balanced rods for fishing for trout, tench, bream and co. Thanks to the semi-parabolic action also lightweight rigs can be cast very far. Additionally the soft action reduces unhooking during the fight with the fish. Despite the progressive parabolic action, these rods resilie very fast and enable very precise casts. These rods are the perfect choice for fishing with sbirolino and indicate also soft bites reliably.

LAGUNA QUIVER

Lightweight and sensitive rods with exchangeable quiver tips. Particularly developed for the light fishing in ponds and gravel ponds. The very sensitive tips indicate even the most delicate bites perfectly – at fishing with sbirolinos, these rods perfectly load and enable long casting distances. During the fight with the fish the tip absorbs every flight perfectly – ideal when very thin lines and leaders are applied. Of course the LAGUNA quiver rods are also suited for light fishing for tench, bream and perch. The 2.4m model is exquisitely appropriate for fishing in small ponds.

TEAM DAIWA MODE 2.0 TAIMEN

The TEAM DAIWA MODE 2.0 Taimen rods have especially been designed for winter fishing for huchen at ice and snow. The sensitive tip action enables you to scan the bottom structure and absorbs shocks from fighting huchen perfectly. The blank features great power reserves in the handle section and masters even big specimen easily. The 2.1m model with a casting weight up to 120g has especially been designed

PROCASTER TROUT

Very lightweight rod with slim blanks and tip action – perfect for fishing for trouts in ponds and flooded gravel pits. Due to the fine action, the PROCASTER TROUT is fitting for fishing with Sbirolinos as well as for fishing for smaller carps, tenches and barbels. This rod features an excellent price-performance ratio. Equipped with premium cork handle, slim carbon fiber blank and aluminum-oxide double leg guides.

blank transmits every move directly to the handle section and provides great power reserves for the fight with big specimens. Perfect for small shads, twisters and mini spoons.

SWEEPFIRE T

EXCELER CATFISH

Very robust and strong rod for fishing for catfish at the Ebro, in Spain as well as at the Po – the EXCELER CATFISH offers enough backbone to force and direct even biggest catfish. The guides are fitting for the use of multiplier reels as well as for fixed spools. All guides are double wrapped for hardest strains. The rod features a fighting handle for a better power transmission during the fight with the fish and a gimbal for usage of a harness. The 2.7 version is perfectly suitable for boat fishing with the clonk. Both larger versions are constructed for buoy- and ground fishing. Equipped with overlapping tip guide, extra strong double leg guides and solid EVA handle.

Coregone rod

TWILIGHT SPECIALST CORREGONE

With support from our coregone specialists we have developed 3 coregone rods, which are especially designed for this exciting fishing technique in alpine lakes and river dams. The goal at the construction of these rods was the design of lightweight and sensitive rods, which absorb every headbutt into the handle section. Nevertheless these rods possess enough backbone, to set the hook without delay. A suchlike conceived action represents a big advantage when fishing for coregones and charrs in depths below 20m, since hooking is drastically improved compared to the use of softer rods. Both carbon fiber tips are extremely sensitive and

indicate every bite reliably. Equipped with premium natural cork handle, real-wood reel seat, real-wood but cap and two carbon fiber tips.

BASIAIR Z45 CARP NEW

The name BASIAIR stands for DAIWA's premium segment at carp fishing since years. The new BASIAIR Z45 does not leave any wishes unfulfilled. Together with our European carp specialists and Japanese engineers we have been working on the design of this rod for 2 years. The BASIAIR Z45 is manufactured in Japan according to highest technical standards and includes all of our latest know-how at blank construction. The V-Joint® spigot joint cares for a harmonic bending curve, whereas the 3DX carbon fiber surface reduces torque and represents a real eye candy. The blank is made of SVF™ carbon fiber material which enables great and accurate casts and absorbs escapes, whereas the AGS carbon fiber guides provide an extremely fast action. We are sure – the best carp rod we at DAIWA have ever made.

TOURNAMENT BASIAIR CARP

In consequence of the great success of the DAIWA BASIAIR reel, it was apparent to develop the perfect matching rod in accordance to Japanese standards. Two years of development and a long testing period were necessary to launch this masterpiece BASIAIR rod, which can be seen as true counterpart to our BASIAIR reel. The alliance of Super SVF Graphite™ and 3DX™ carbon fibre enables the construction of a slim blank with a very fast but resilient action. The blank's surface is made of DAIWA's exclusive 3DX™ carbon fibre material, which reduces torque and appears like reptile skin. Since all other features of the BASIAIR are made of exclusive components, this rod will match even to the highest demands.

TOURNAMENT CARP

The name TOURNAMENT is causing enthusiasm within the carp scene since many years – this name stands for highest quality and perfection. Especially at longer fishing trips you have to be able to rely on your tackle – otherwise a fishing trip can turn into a nightmare. The new TOURNAMENT carp rods provide exactly this security and perfection, to withstand all adversities. Thanks to the usage of SVF carbon fiber material, these rods are very lightweight and feature astonishing handling properties regardless their great power reserves. The TOURNAMENT rods feature a very strong backbone, to control fish during the fight even over great distances. The tip section fully loads during the cast and catapults the rig to extreme distances. The usage of the new FUJI® K-guides reduces the threat of line tanglings during the cast considerably and additionally supports the fast action.

EMBLEM CARP NEW

The very popular EMBLEM carp rods have been redesigned completely for the new season. The blank used at the EMBLEM rods features large power reserves and offers a perfect alliance of tip action and strainable backbone for extreme casting distances. The stiff carbon fiber blank fully loads at powerful casts and facilitates extreme casting distances. The tip action acts as shock absorber during the fight with the fish and reduces losses. Especially when long casts are required, the EMBLEM rods are the proper choice!

WINDCAST CARP

Slim, fast, accurate and great power reserves – these are the features of this DAIWA carp rod series. The slim carbon fibre blank, made of woven carbon fibre, isn't just an optical beauty – it also helps to reach enormous casting distances. The relatively parabolic 2lbs version has been constructed for "Pleasure-Fishing" – it is also perfectly suiting if you are "just" fishing for regular carps up to 8-20lbs. The WINDCAST® rod features a „night-glow“ banderole below the reel seat, which is glowing in the dark and facilitates grabbing the rod at night.

TOURNAMENT FEEDER

The brand name TOURNAMENT since years stands for highest quality standards from DAIWA. With the TOURNAMENT FEEDER we present you two heavy feeder rods in the premium segment, which won't leave any wishes unfulfilled. The blank has been constructed by our engineers in Japan and the rods are produced in our own factory in Scotland, which is known as one of the leading rod manufacture worldwide. The 3.90m model is a classic heavy feeder rod for medium distances with an extremely fast and balanced action. The 4.20m model is somewhat stronger and designed for distance fishing with heavy feeders at big rivers like Rhine, Danube or Meuse. A rod made for perfectionists and competitions.

SHOGUN HEAVY FEEDER

With the SHOGUN HEAVY FEEDER, DAIWA presents a feeder rod made for highest expectations. Due to the use of HVF™ High Modulus carbon fiber in combination with premium FUJI® components our Japanese engineers could optimize the balance and action. Therefore despite the length of 3.9m and 4.2m these rods face not the frequent fate of top-heaviness. The slim carbon fiber blank resiles very fast and thus supports precise casts. Blank and quiver tip form a perfect seamless bending curve, which absorbs the flights of barbs, breams & Co. easily. The quiver tips feature extra big guides for the easy use of shock leaders.

AQUALITE COARSE FISHING RODS

This series convinces by slim blank diameters, light weight blanks and high quality components. Made of High Modulus carbon, those rods are extraordinary well balanced. By using the exclusive DAIWA sling reel seat at the SENSOR FLOAT and POWER FLOAT the balance can perfectly be adjusted to the reel's size.

AQUALITE

POWERMESH FLOAT

With the POWERMESH FLOAT rods we offer you a small series of premium coarse fishing rods for light to medium heavy fishing for tench, carp and bream. Fun during the fight with the fish comes first at this rod thanks to their ultra slim blank diameter. The action opens till the handle section even at medium breams and small carps and therefore provides perfect shock absorbance. The big guides easily allow the use of stoppers. At tests this rod turned out to be an ideal choice for pond fishing or for fishing for coregone species with the float

FUJI reel seat

AQUALITE SENSOR FLOAT

This rod is distinguished by an extreme slim, light weight blank and a very sensitive solid carbon tip that is nearly unbreakable. These rods are ideally suited for light fishing for tench, bream, perch and small carps.

The perfect rod for sbirulino fishing and fishing for coregones with the float rig, since the super soft tip absorbs every head shock and reduces unhooking considerably.

TEAM DAIWA PILK NEW

With the new TEAM DAIWA jiggling rods, DAIWA presents a range of premium saltwater fishing rods, which have been designed according to the requirements of Norway as well as of the Baltic and North Sea. The tip action perfectly absorbs head shocks of cod and friends and therefore reduces the threat of losses. The slim and lightweight HVF® carbon fiber blank offers huge power reserves to force even large cods to the surface uncompromisingly. The FUJI®-K guides reliably prevent tanglings at the guides by their special frame design.

Both models with 300g casting weight are designed for large pirks and shads – also perfectly applicable for halibut in shallow water!

The 2.7m model with a casting weight up to 100g has been designed for fishing for coalfish and pollack with small pirks and shads – fishing fun even at smaller fishes is guaranteed by the slight parabolic action.

SEALINE X'TREME INTERLINE

It's not necessary to say much about this classical rod – many big halibuts and cods have been landed with our SEALINE X'TREME INTERLINE during the last years. Everybody who has once fished with this rod does not want miss it. The 20-50lbs version is suitable for sea fishing with all kind of lures for halibut, cod, ling and wolffish. The tip is perfectly sensitive even

SEALINE X'TREME 10-15LBS

NEW

Among many sea fishermen, the SEALINE rods meanwhile have a legendary reputation, since these rods enabled the catch of numerous big fish, like halibuts over 300lbs and cods over 60lbs without problems.

SEALINE

SEALINE X'TREME TRAVEL

NEW

Travel rods are getting increasingly popular for fishing trips to northern Norway, since these multipiece rods offer the possibility to carry them along on vacation, without the need for expensive rod transportation tubes. At the design of travel rods, the nowadays established rod construction technology enables the construction of multipiece rods, which feature a similar action to a 2-piece rod. The SEALINE X'treme Travel series from DAIWA offers a small range of premium and well equipped travel rods, which cover all popular fishing techniques at Norway. You don't need to accept a compromise concerning quality and reliability.

SEALINE X'TREME TRAVEL BOAT

These boat rods are designed for heavy-duty fishing in Norway for halibut, cod and ling. Lightweight blanks with tip action and great power reserves in the handle section. Equipped with FUJI® Alconite guides, FUJI® heavy-duty reel seat, V-joint spigot joint and premium EVA handle. These rods are delivered in a padded cloth bag, which perfectly protects the rods from damages in the suitcase.

SEALINE X'TREME TRAVEL INTERLINE

The design of a multipiece interline travel rod has posed a real challenge to our Japanese engineers, since this implies the transfer of the high quality standards of one-piece interline rods to a multipiece blank construction. After two years of development, we already recognized at the first field tests, that our engineers have accomplished a major achievement at designing these rods. The action is nearly identical to that of a one-piece rod. The soft tip perfectly absorbs all flights and headbutts, while the strong backbone provides great power reserves during the fight with the fish. Like this, you can fight also with huge halibuts and cods without being forced to compromises. These rods are perfect for fishing with pirks between 100g and 300g as well as with XL shads up to 30cm in combination with heavy jigheads.

SALTIGA SPIN

Since many years, SALTIGA stands as synonym for highest quality and durability at fight with the giants of the seas like halibut, GT, amberjack and co. The SALTIGA spinning rods are especially dimensioned for these predators. The special blank construction enables the manufacturing of perfectly balanced rods, which resist highest strains, but nevertheless enable a sensitive and light handling. The tip is especially soft in the upper quarter and therefore absorbs headbutts and strikes perfectly, which occur very distinct at fishing with braided lines. Thanks to the special X45 blank construction, these rods can be strained to the extreme during the fight with the fish. All guides have been double wrapped for extreme bending curves. The high-class FUJI®-K guides reliably prevent tanglings during the cast and are insusceptible to strikes and

SALTIGA BOAT

With the SALTIGA boat rod, DAIWA presents a premium boat rod with best components intended for heavy fishing in Norway. The SALTIGA BOAT has especially been interpreted for the fishing with very large and heavy shads for halibut and heavy fishing with natural baits for ling. By combining DAIWA HVF carbon fiber material with the nearly unbreakable GlaTech glass fiber construction, we were able to build a rod, which is nearly unbreakable even under highest strains despite its low weight and the good balance. The soft tip indicates every bite reliably even when fishing in great depths – during the fight with the fish the rod absorbs every headbutt perfectly and reduces unhooking. The strong backbone provides you with the necessary control even at toughest fights. Additionally this rod

FUJI reel seat

TEAM DAIWA SEABASS

Since fishing for seabass is getting increasingly successful and popular also in the North Sea, we developed a small rod series. The short models are designed for boat fishing, while the long models (3.30m and 3.60m) are intended for use from the bank, where long casts are required. The somewhat softer tip reduces unhooking and the strong backbone enables long casting distances also with heavy lures. Despite their great power, also the 3.30m and 3.60m models

hits. The casting weights from 50-135g or 70-185g especially cover the light to medium heavy fishing with shad and pirk and are also perfectly applicable for cod fishing at the Baltic Sea or the Atlantic. Both 2.10m models feature a single-piece blank, which is mounted on the handle section. The two 2.40m models feature an equal blank division.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides

SALTIST HALIBUT SPECIAL

NEW

Targeted fishing for halibut is getting more and more popular, since increased knowledge about the right fishing spots in combination with the development of special fishing techniques, where shads are presented in medium water levels, meanwhile enhance the chance for success.

The new DAIWA SALTIST HALIBUT SPECIAL has particularly been designed for fishing with medium and large shads. The soft tip reduces the threat of losses and the strong backbone offers enough reserves to force even huge halibuts to the water surface. By the undivided blank construction, weak points like joints have been completely eliminated. The short handle section cares for an optimum lever during the fight with the fish. According to your preference, you can choose between a version for spinning, or multiplier reel, which both feature the same blank.

SALTIST HALIBUT BOAT

With small guides for use of multiplier reels. This rod is also perfectly applicable for trolling for halibut with shads or large plugs.

11545-226	2.25m	200-400g	172cm	2	350g	8		

MEGAFORCE SOLID TIP NEW

The special solid glass fiber tip, which is melted into the carbon fiber blank, is literally made for saltwater fishing. The soft tip is nearly unbreakable and therefore greatly reduces the threat of losses during the fight with the fish. Lightweight and very well balanced rods with great power reserves in the handle section.

MEGAFORCE SOLID TIP PILK

This small series covers most fields of application of jigging in Norway as well as in the North and Baltic Sea. The solid glass fiber tip reduces losses and the rods have enough backbone to force even large specimen.

MEGAFORCE PILK **NEW**

With the MEGAFORCE jigging rods, DAIWA presents a completely reworked jigging rod series for the season 2015. The rods are made of high modulus carbon fiber and are designed for fishing in the North and Baltic Sea as well as for fishing in Norway. The rods are very well balanced and their soft tip perfectly absorbs headshakes of cod & Co. Ideally suited for the use of braided lines. This series covers nearly all fields of application at the North Sea.

NINJA BOAT INTERLINE **NEW**

Fishing with interline rods is getting increasingly popular at seafishing, since the interline construction offers essential advantages compared to conventional rods with guides. The strain is evenly scattered over the whole blank, ensuring an optimal bending curve and power transmission. Broken guide inlays due to transport or fallen over rods belong to the past.

SENSOR SURF

The 2.25m version with 200-500g casting weight has been designed for jigging for cod in great depths as well as for fishing for halibuts with large shads.

The 2.7m version is a light seafishing rod for fishing for pollack and coalfish with small shads and pirks.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides		
11896-210	2.10m	150-300g	110cm	2	260g	7		
11896-225	2.25m	200-500g	117cm	2	300g	8

SEAHUNTER X

With the SEAHUNTER X series we offer premium carbon fiber rods with a fantastic price-performance-ratio. All rods have a spigot joint for an optimal bending curve and feature a premium natural cork handle. Seawater-proof solid double leg guides complete this premium equipment which is remarkable for this price range.

EXCELER TROLLING

EXCELER TROLLING

Special rod for trolling with Downriggers and Dipsy Divers. The EXCELER TROLLING has been developed in cooperation with our DAIWA consultants from Sweden. Made for catching salmon, sea trout, pike and cod. Of course this rod features a gimbal and an overlapping tip guide for line protection. The combination of carbon fiber and fiberglass warrants high breaking strength even under great strains and a well balanced feeling.

PILK

This jiggling rod series offers a strong backbone in connection with a somewhat softer tip to reduce the danger of breakage with braided lines. Perfectly suitable for usage in the Baltic or German Sea as well as for fishing in Norway or Iceland.

Art-No.	length	CW	cl. lgth.	parts	wt.	guides		
11534-210	2.10m	100-200g	109cm	2	215g	6

TOURNAMENT 8 BRAID

The excellent braided line from DAIWA - made in Japan. With the TOURNAMENT 8 BRAID offer a first class, Japanese high performance line that is braided from 8 single strains. Any line can not be braided with rounder profile as the TOURNAMENT. By the special surface coating the line runs silent through the guides and can be knotted very well as sliding of the knot is hardly possible. The breaking strength is determined by Japanese standards. This line keeps its diameter even after heavy usage. As a special feature, the line is delivered on a special spool construction - with this spool you can wind the line on the reel under pressure without other support like towels, etc.

TOURNAMENT 8 BRAID ACCUDEPTH MULTICOLOR

Our popular TOURNAMENT 8 BRAID is also available in a Multicolor version (blue, orange, green, red, purple). Thanks to the change of color, you can calculate the distance to the lure without further devices. Ideal if fish are concentrated in one depth at the open water or for trolling – the distance to the lure is calculated immediately. The thinnest version with 0.10mm is perfectly suitable for coregone and char fishing. Color change every 10m. Additionally you can calculate the current line length via yellow-black-yellow marks, which are applied every meter – additionally there is a 20cm long yellow mark every 5m. This Multicolor versions are getting increasingly popular, especially at sea fishing for coalfish and cods in the open water as well as for speed-jigging in the tropics.

TOURNAMENT BRAID SUPER SINKING

The usage of sinking lines is gaining popularity at match and feeder fishing as well as at fishing for carps. The TOURNAMENT BRAID is sinking fastly due to its specific weight of 1.4 and adapts to the ground structure. This braided line is one of the fastest sinking lines at the market. The special surface coating additionally makes this line relatively abrasion resistant against barriers.

SHINOBI BRAID

DAIWA proudly presents this high-quality, tight round braided line for fresh and salt water usage. This line is completely manufactured in Japan and fully consists of Dyneema® fibers. A special surface coating avoids the line taking on dust and improves abrasion resistance. Due to its coating, guide friction is reduced – as a result you can reach great casting distances silently while spin fishing. Thanks to the special spool construction, the line can be wound on the reel under pressure easily without any support like towels, etc.

Available in dark green and fluo-yellow.

TEAM DAIWA T.D. LINE

With the TEAM DAIWA monofilament line we present an innovative spin-fishing line, made in Japan. The line's special feature is its low stretch – you always have straight contact with the lure and increase your hook rate significantly. The main disadvantage of non-stretching lines – the low knot strength – has been eliminated completely in the case of the TEAM DAIWA. If the line reaches its stretching maximum, it retreats just before exceeding the critical limit. So the knot strength is nearly as good as with normal stretching lines. The TEAM DAIWA is the perfect line to fish over great distances or in clear water.

SUPER SHINOBI

The SUPER SHINOBI belongs to the most popular lines within sea trout anglers since many years. Now we further optimized the SUPER SHINOBI regarding stretching factor and knot strength. Due to the special surface coating, this line produces very little friction resistance and enables extremely long casting distances.

- ▶ Made In Japan

INFINITY FLOOR IT

Carp anglers increasingly demand for a sinking monofilament line especially for carp fishing. The INFINITY FLOOR IT is a fast-sinking fluorocarbon line, which features a soft structure thanks to a special treatment. Thus this line is perfectly suitable as main line.

INFINITY DUO CAMO

The INFINITY line belongs to the most recognized monofilament lines among the carp scene. The new INFINITY DUO CAMO is alternating colored dull-brown and dull-green, and therefore is hardly detected by the fish. A very good wet knot strength in combination with a medium stretch reduces the loss of fishes during the fight considerable and enables fishing over long distances.

Color: brown-green

TOURNAMENT S.W. SHOCKLEADER TYPE F

With the TOURNAMENT S.W. shock leader line type F (Fluorocarbon), you get one of the high end fluorocarbon lines within the Japanese market - the diameters are specially made for sea fishing for halibut, cod and coalfish as well as for fishing for GT, amberjacks etc. Due to the large spool diameter, the line exits the spool in big loops and thus can be straightened easily - especially for tunas and coalfish a straight, smooth leader is a crucial advantage.

Art-No.	ø	strength		capacity
		kg	lb	
12956-060	0.60	22.4	50.0	50 m

- ▶ 100% fluorocarbon
- ▶ High breaking strength
- ▶ High knot strength
- ▶ Extremely high abrasion resistance
- ▶ Fast sinking
- ▶ Large spool diameter
- ▶ Made in Japan

TOURNAMENT S.W. SHOCKLEADER TYPE N

The TOURNAMENT S.W. leader material type N (nylon) is ideally suited as leader for different fields of application within sea fishing. The material mix has been chosen in a way that makes the line very smooth and easy to knot despite its large diameter. Due to the large spool diameter, the line exits the spool in big loops and thus doesn't curl.

DAIWA TERMINAL TACKLE 2015

DAIWA

TOURNAMENT

TOURNAMENT RANGE

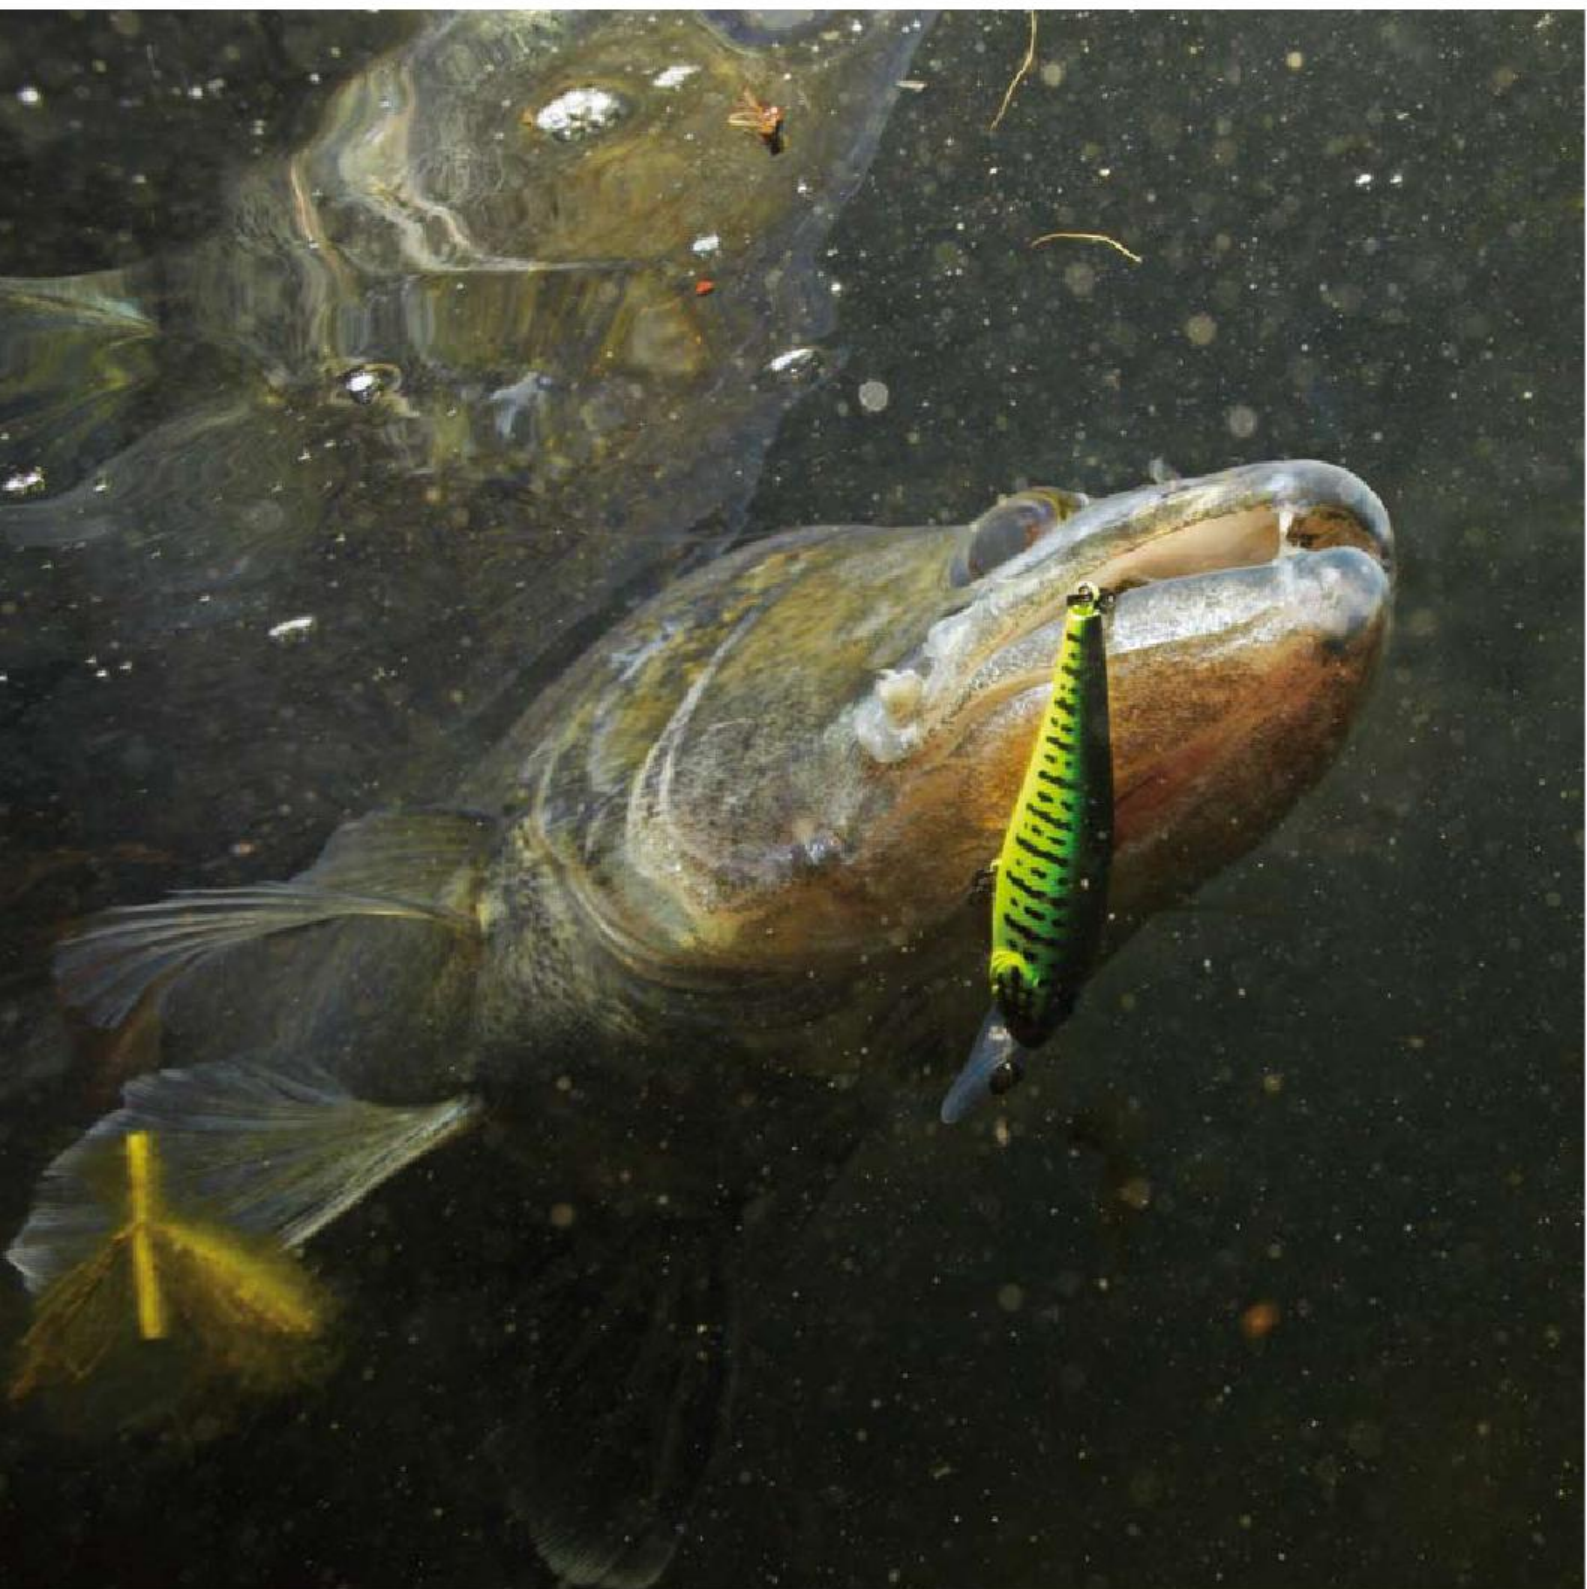

The name TOURNAMENT stands as synonym for highest quality and premium standards within the DAIWA product range. With the new DAIWA TOURNAMENT range we offer you a selection of elaborate and approved supplies and sundries, which largely have been developed in cooperation with our Japanese parent company in Tokyo and are also sold in Japan. Partly these products are even made in Japan. Our aim is to supply you with absolutely reliable and premium products, which you can rely on in every situation. All Products have been tested according to their reliability and efficiency by our team anglers in Europe and Japan.

TERMINAL TACKLE

TOURNAMENT PLUGS

With the new TOURNAMENT lures we are delighted to present you a range of premium quality lures made in Japan. During the past years, the trend for high class lures has become stronger and stronger and therefore we decided to develop a range of top class products in cooperation with our Japanese engineers to match European demands. All lures are entirely produced and processed in Japan, feature Japanese split rings and Japanese sharpened hooks and are individually tested for perfected action. The TOURNAMENT lures provide excellent results due to their individual character and wide choice of colors.

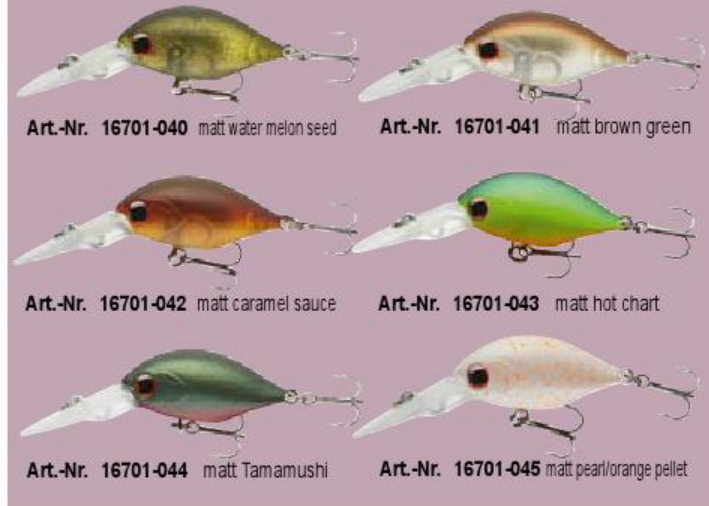

TOURNAMENT ROLLING CRANK DR-F NEW

The TOURNAMENT ROLLING CRANK DR suits perfectly for fishing for perch, trout and chub. The DR model quickly gains depth and features a wobbling action. The Rolling Crank DR is successful at steady retrieving as well as at twitching.

Diving depth: ca. 1.5m

Art-No.	length	cont.
16701-04...	32 cm	1 pc

TOURNAMENT XL SHINER 130F

The XL SHINER 130F represents an exceptional plug for fishing for zander and pike. The 13cm model is designed for middle water depths and dives between 1.5 and 2.5m – perfect when fish preferentially reside in the upper water layer during summertime. Thanks to the patented G.O.S. Balancer System this plug can be cast very long. Additionally, this silent plug does not contain any rattles – ideal for overfished waters, where rattles meanwhile increasingly produce a harming effect. Due to its buoyancy, the XL SHINER is also perfectly applicable for “bottom-bouncing” – at this technique the plug hits the ground regularly and rises up when retrieving is stopped. Because of its diving lip, the XL SHINER is also perfectly suited for twitching. Of course this TOURNAMENT plug is made in Japan to 100%.

Art-No.	length	wt.
16700-7...	130 cm	225 g

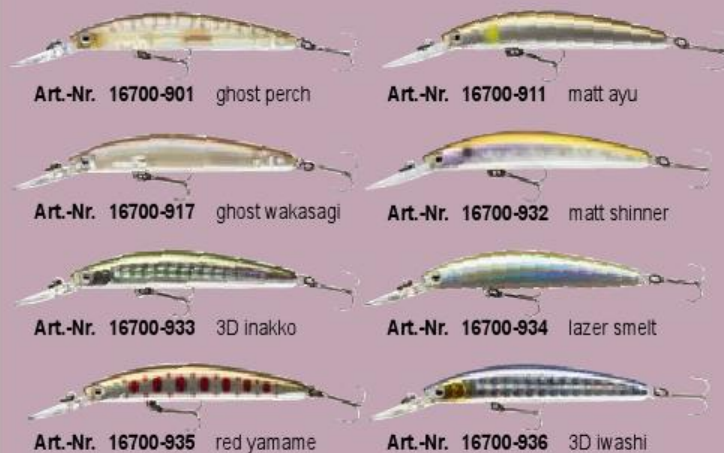

TOURNAMENT DOUBLE CLUTCH 60

The DOUBLE CLUTCH is now also available as 60mm version. In Japan the DOUBLE CLUTCH series belongs to the most successful plugs ever and has already successfully tricked many large predators. The suspending 60-SP moves flanking and wobbling, which qualifies this lure for modern presentation techniques like twitching and jerkbaiting as well as for steady retrieving or trolling. Thanks to the patented SILENT G.O.S. Balancer System, this lure displays excellent casting characteristics regardless its small own weight.

The DOUBLE CLUTCH 60SP is a real insider's tip for overfished waters. Equipped with Japanese SaqSas trebles!

Diving depth ca. 60-90cm, trolled up to 1.5m

Art-No.	length	wt.	
16700-9...	60 cm	36 g	

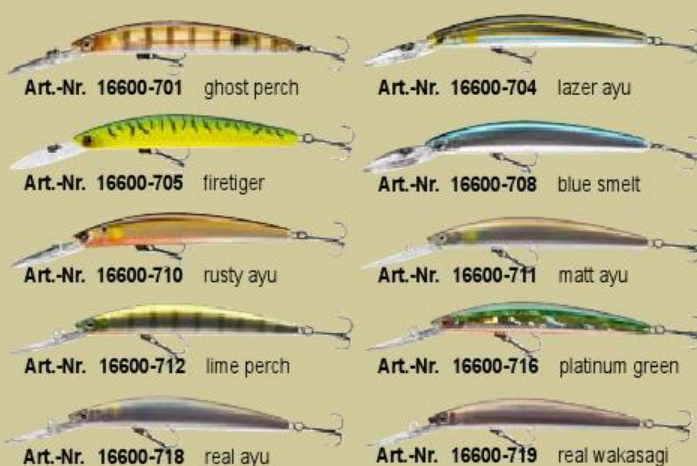

TOURNAMENT DOUBLE CLUTCH 75

The DOUBLE CLUTCH is one of the most successful lures in Japan and already proved many times to achieve exceptional catches. During test fishing in Germany we could entrap pike and perch even with simple retrieving techniques. With its slim shape of the body it imitates perfectly small prey fish like e.g. a bleak. The DOUBLE CLUTCH is a suspender and can be fished almost on place as soon as it is brought down to depth. The action of the DOUBLE CLUTCH is a mixture between flanking and wobbling movements that are well suited for twitching- and jerking- techniques.

Cast, the diving depth adds up to about 1m, trolled, up to 2m.

Art-No.	length	wt.	
16600-7..	75cm	50g	

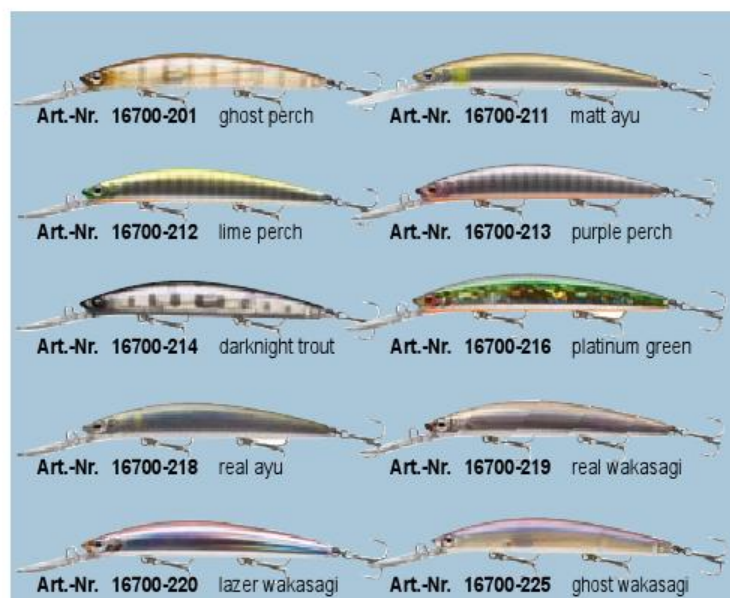

TOURNAMENT DOUBLE CLUTCH 95

The big brother of the 75mm version. The DOUBLE CLUTCH'S belong to the most successful plugs at the Japanese market. Due to its slim body shape, small prey fish, like bleaks, are perfectly imitated. Thanks to its "suspender"-qualities, this plug can be fished nearly in stagnation. Short, powerful punches and speed-ups animate the DOUBLE CLUTCH 95 to show a very catchy movement pattern, which no predator can resist. Due to the patented „Silent Gravity Oscillating System" one can reach great casting distances – additionally this "silent" plug is perfectly fitting for highly frequented waters, in which plugs with the usual rattles are already well known among the predators.

Diving depth: 1.5m – Trolling: up to 2.5m.

Art-No.	length	wt.	
16700-2.	9.5cm	120g	

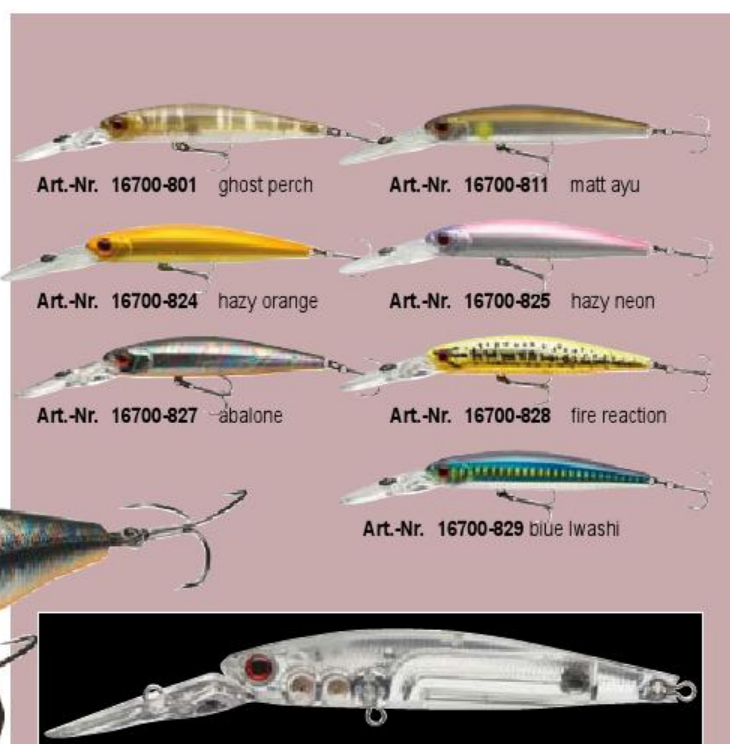

TOURNAMENT

TOURNAMENT SCUBA

The TOURNAMENT SCUBA is a real all-round talent and is a great choice for fishing for perch, zander and pike. Due to the long diving lip, the lure readily gains depth - ideal for zander fishing, when the lure occasionally should hit the bottom. Due to its slim shape it imitates a small prey fish excellently. The SCUBA additionally is perfectly suitable for twitching, where it breaks out strongly flanking and rotating. The G.O.S Gravity Oscillation system enables long casting distances due to the translocated center of gravity during the cast and provides a soft rattle noise for a new ambient sound. Suspending.

Diving depth ca. 2.0m - above 3m when trolled.

Art-No.	length	wt.	
16700-8...	8.8cm	11.5g	

TOURNAMENT BABY MINNOW

This classic suspending minnow is perfectly suited for targeting perch, trout and asp. Thanks to the fixed inner weight and the solid center of gravity also very well applicable for fishing in currents. Thanks to the missing rattles the proper choice for heavily frequented waters, where usual lures with rattles provoke a rather scaring effect. A real winner for trouts! Suspending.

Diving depth ca. 0.5m.

Art-No.	length	wt.	
16700-6...	60cm	35g	

TOURNAMENT SHINER

Classic, minnow shaped lure. This lure is suitable for the entire spectrum of fishing techniques. Depending on the technique its movements are strong flanking or wobbling and it imitates a prey fish swimming to the ground. The length of 60mm and the slim body make this floating lure suitable for almost all predators in fresh water.

Diving depth when cast ca. 1.5m, trolled up to 2.5m.

Art-No.	length	wt.	
16600-5...	60cm	55g	

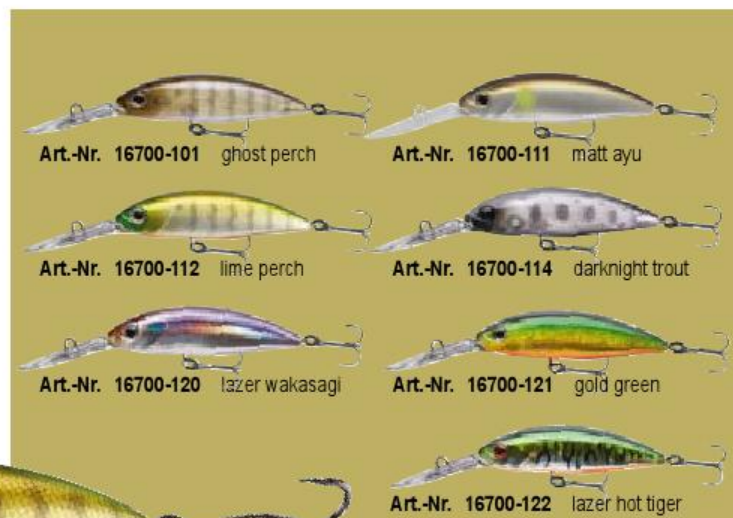

TOURNAMENT SPIKE 53SP

The SPIKE has been developed by one of the most famous bass anglers in Japan, Toshi Namiki, in cooperation with DAIWA. The SPIKE's concept consists of developing a plug for medium diving depths, which is getting down very fast after the cast - consequently the lure is running in the preferred depth for a longer time. It is also suiting perfectly for fishing in areas close to the shore.

The special way of construction and the compact shape enables great casting distances - ideal for baitcast reels! The SPIKE is also perfectly fitting for fishing for bass, asp and zander.

Diving depth: about 2.0m - Trolling: up to 2.5m.

Art-No.	length	wt.
16700-1.	5.3cm	5.0g

TOURNAMENT

TOURNAMENT BABY CRANK

Our smallest in the program - the BABY CRANK emits strong vibrations and moves very wobbly through the water. The thin diving lip is made of robust plastic and adds up quickly to depth. Especially perch go crazy when this lure is fished variously and provokes intense bites. This floating lure is very well suited to be placed under craning bushes in order to catch trout.

Diving depth ca. 0.5-1.2m

Art-No.	length	wt.
16600-4.	3.5cm	3.5g

TOURNAMENT MEGA SCOUTER

The 68mm MEGA SCOUTER is a floating lure with a very energetic wobbling action and short, bustling movements. Due to its diving lip, it reaches very quickly deeper water levels. The rattles emit strong vibrations and frequencies you can feel during the retrieve up to the rod during retrieving. Usually the sound even activates lethargic predators and enhances the bite's frequency. The inside weight system is perfectly balanced to let the main tungsten weight role to the front during a short and strong push of the rod to enable an even steeper diving angle in order to reach depth faster.

Cast, the diving depth adds up to 2.5- 3.5m, trolled the lure is able to dive up to more than 5m – perfect for zanders on the ground.

Art-No.	length	wt.	
16600-1.	6.8cm	14.0g	

TOURNAMENT SCOUTER

The SCOUTER has a strongly wobbling action and emits very strong acoustic waves and sounds that entrap predators even from far distance. Even in muddy waters, this lure shows its full potential when predators localize their prey with the lateral line. It can be cast very well thanks to the compact shape of the body. This floating lure is ideally suited for large perch and zander.

Diving depth when cast ca. 1.5m, trolled up to 3m.

Art-No.	length	wt.	
16600-2.	6.0cm	10.0g	

TOURNAMENT BABY VIB

Vibrating lure without rattles for fishing for perch, trout and asp. Perfectly suited for heavily frequented waters, where usual lures with rattles provoke a rather scaring effect. Thanks to the light weight this sinking lure can be retrieved very slowly at a constant depth - ideal for shallow water and weedy spots. An excellent lure for ultra-light fishing. The available color selection covers all requirements ranging from natural decors to loud colors.

Sinking.

Art-No.	length	wt.
16700-4...	4.7cm	5.5g

TOURNAMENT CURRENT MASTER SR

The CURRENT MASTER SR is made for the upper water levels and is ideally suited for asp. Thanks to the construction of its body and diving lip it can be fished very fast and it will not break out sideways and loose it's action- ideal for rivers and streams. This lure shows its full potential when it is fished variously. With the CURRENT MASTER you can anger the target fish with letting the lure dance wildly on the spot to entrap them.

Construction: Floating, diving depth ca. 0.5-1.5m.

Art-No.	length	wt.
16600-8...	9.3cm	12.0g

TOURNAMENT CURRENT MASTER DR

This 93mm floating lure is a real secret weapon for zander, perch and asp. The DR model is made for medium water levels and the diving depth adds up to 1.5 – 2m depth when it is cast. Trolled this lure reaches up to 2.5m. By the patented „Mag Lock Silent Weight Oscillation System“, exceptional casting distances can be achieved. The special construction of the body and the diving lip makes this lure also suitable for fishing in stronger currents and rivers. Strong flanking and suspending action make this lure the perfect choice for twitching- and stop-and-go techniques.

Art-No.	length	wt.	
16600-9.	93cm	120g	

TOURNAMENT WISE MINNOW

An exceptional lure for ultra-light fishing. By the rather fast sinking behaviour the WISE MINNOW is ideal to reach depth fast in deeper holes and dimples in streams and rivers. The tungsten weight is fixed inside the body and provides good stability to the lure even in stronger currents. The WISE MINNOW has flanking movements and is a real magnet for trout and perch.

Art-No.	length	wt.	
16700-0.	50cm	50g	

TOURNAMENT SOFT PLASTIC LURES

TOURNAMENT D'FIN

Shad with classic wobbling tail. Generates strong flanking moves even without jighead. At tests in France, this lure was a real nightmare for zander and perch. Due to the special rubber formulation and the addition of salt, this shad can even be fished without jighead and is ideal suited for the use of off-set hooks - perfect for weedy areas. The rubber contains squid flavor, which received most bites during the numerous tests also when fishing in fresh water. The rubber formulation is colorless - different colors can be stored together without bleeding into each other. Available in 7.5cm and 10cm. Made in Japan.

TOURNAMENT D'TAIL

In cooperation with one of the leading bass anglers of Japan we developed a range of catchy shads, which are 100% made in Japan. The D'TAIL is available in 2 sizes - a small 7.5cm version, which is determined for drop shot fishing and a 10cm version, which is applicable for both jigheads and off-set hooks. The rubber contains squid flavor, which received most bites during the numerous tests also when fishing in fresh water. The rubber formulation is colorless - different colors can be stored together without bleeding into each other.

TOURNAMENT

TOURNAMENT D'SWIM

14cm model

Its length of 14cm makes this lure a real all-rounder. Big perches are able to swallow this morsel, pikes are attracted since its appealing largeness and zanders can cope with this size without problems. The rubber formulation contains squid flavor, which obtained best results during extensive tests even at freshwater fish species. The rubber formulation is moreover color neutral - different colors can be stored together without staining. The color „Pro Green“ additionally contains fluo particles, which provide a better bite frequency especially in cloudy water. Of course also the D-Swim is Made in Japan to 100%.

11.5cm model

The successful D'SWIM is available also in a smaller version of 11.5cm since the season 2014. Since this size is mainly applied for fishing for zander and perch, we used a somewhat softer rubber mixture for the 11.5 cm version, which facilitates the sucking of the lure. Of course the 4.5" D'SWIM is equipped with the same squid flavor as the 14cm model and is made in Japan to 100%.

TOURNAMENT DS-35

This PIN TAIL softplastic lure is perfectly suited for finesse-fishing with small jigheads or drop shot fishing. The body shape was designed according to the D-shape, which makes the DS-35 two-sided applicable. Depending on the desired action, the lure can also be fished belly-upwards, which causes a strong darting-action, when used in combination with bullet-jigheads. Mounted conventionally, this lure flanks very tempting even when retrieved steadily. The rubber mixture of this lure is very soft, to facilitate the sucking by perch & Co. Handpoured made in Japan!

TOURNAMENT

DAIWA DUCKFIN SHAD

The DUCKFIN SHAD from the Japan range convinces by its action and rubber formulation. Applicable for the use with jigheads, dropshotting, Carolina Rig and off-set hooks. The size of 9cm is one of the most frequent used sizes, since zanders as well as perches are attracted. The lure flanks already at slow retrieving and moves tilting through the water. Thanks to the dorsal slit this lure is perfect applicable for fishing over flat waters and the use with off-set hooks.

The color range has been chosen to provide adequate colors for clear and turbid water.

The successful DUCKFIN SHADS are now also available in a smaller XS version – the new 6cm model has been especially designed for fishing for trout and perch.

TOURNAMENT

DAIWA SOFT PLASTIC LURES

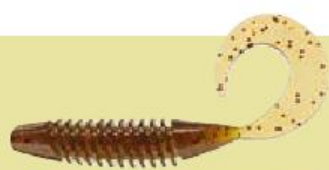

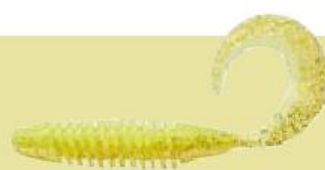

GRUBIN' SHAD

Soft plastic lures with curly tail still belong to the most catchy lures for pike, zander and perch – the GRUBIN SHAD features some new details, which further increase the fishing success. The ribbed body shape optimizes the use of attractants like MEGASTRIKE, since the attractant can be applied to a large surface area and remains within the ribbed structure for a long time without getting washed out. The ribbed structure additionally causes turbulences and vibrations under water, which contributes to the fishing success.

The head finish of the GRUBIN SHAD is designed as "Flat Nose", to adopt jigheads perfectly to the body.

D-POPPER FROG NEW

This lure demonstrates its strengths especially at shallow waters and at strong underwater vegetation. The D-POPPER FROG can be presented very slowly, while the typical splash sound can be generated with small and hard strokes. Perfect for summertime, when fish hunt actively at the surface. The strong double hook is integrated into the body, enabling the angler to present the lure even within weedy areas. The special tunnel construction prevents intrusion of water to the main chamber by the hook shank.

DAIWA SPINTAIL SHAD NEW

The DAIWA SPIN TAIL SHAD is a blend of softplastic and metal lure, which is especially successful at fishing for pike. The spinner blade at the tail causes strong blast waves and light reflections under water. Just let the lure dwindle down after the cast while holding straight contact – most bites are received at this stage. For optimum success the lure should be jigged from the bottom to the middle water, followed by another dwindling phase. A real insider tip during summertime, when fish are hiding close to the bottom. Available in 2 sizes.

TOURNAMENT RUBBER JIG SS RH NEW

These skirted jigs can be fished alone as well as in combination with small worms or softplastic lures. During development of these skirted jigs, we have focused on the application at European waters. Therefore we have chosen somewhat heavier jigheads of 7g and 10g in combination with relatively small hooks of the size 2/0, which is beneficial for fishing for pike, zander and perch in deeper waters or in currents. The Japanese SaqSas hooks care for optimal hooking efficacy. The special SaqSas coating reduces penetration resistance up to 40%. The 5 different colors cover all fields of application from clear to cloudy water.

THE TOURNAMENT ACCESSORIES RANGE

TOURNAMENT TUNGSTEN

Tungsten is literally predestinated for fishing applications, since it features essential advantages compared to lead, which compensate the higher price by far. The Daiwa Tungsten products are taken over from the Japan range and have been engineered according to the highest demands concerning shape and surface by the Daiwa Japan consultants. Thanks to the high density of 19 g/cm³ compared to lead, which weighs about 11 g/cm³ tungsten exhibits a significant higher weight at the same volume and is one of the heaviest existing metals.

small body the soft plastic lures are less damaged as with conventional lead sinkers. The barb provides safe grip within the lure. For you we have taken over the most important sizes from the Japan range.

TOURNAMENT TUNGSTEN BULLETS

Tungsten bullets display clearly less flow resistance and thus increase the sensitivity. Because of the smaller surface the casting distance is also raised in contrast to lead sinkers. Thanks to the compact shape fish hardly sense resistance while taking line and the thread of losses is greatly reduced.

- ▶ High density
- ▶ Considerable smaller surface than lead
- ▶ Fewer losses
- ▶ Increased casting distance
- ▶ Improved bite detection
- ▶ Tubing for line protection
- ▶ Camouflage surface, dull green

TOURNAMENT DROP SHOT RIG WOS

This special Drop-Shot rig equips you with the opportunity, to modify the distance between lure and ground within seconds. For that reason, our Japanese team anglers developed a special knot, which allows shifting and reattaching of the hook on the leader in very fast manner. Like this, you can easily adopt your rig according to the current preference of the fish and the bottom structure. By pushing the knot together, you can freely shift the hook on the leader – by stretching the knot, the hook is fixated for hooking and fight with the fish. Made with our Japanese Offset-hooks with SaqSas coating for an optimal hooking rate.

TOURNAMENT DROP SHOT RIG FFN

This Drop-Shot rig has been developed especially for the application of small and smallest lures – the extra thin FFN hook with SaqSas coating influences the lure action only to a minimal extend and guarantees instantaneous hooking. Perfect in connection with the new D-BUG and DS-35 lures.

Content: 2 ready rigs

16510-802	FNN 2	0.22	

TOURNAMENT W-SNAP

NEW

Very strong wide radius snap made of spring steel. Perfect for fishing with plugs and jigs. The wide radius cares for a freely action of plugs. The size L is additionally perfectly suited for jerkbaiting and large trolling plugs. Available in 3 sizes.

Art-No.	size	strength	cont.
16512-200	S/9mm	9.0 kg	10 pc
16512-201	M/12mm	20.0 kg	10 pc
16512-202	L/16mm	32.0 kg	10 pc

TOURNAMENT 8-SNAP

The special shape allows a very fast change of the lure. The lure is absolute safely attached and won't get loose during the fight with the fish. Thanks to the small shape and the low weight very well suited for ultra light lures - the lure action is not affected. Available in 2 sizes. The smaller version is also excellent appropriate for streamers.

Art-No.	size	cont.
16510-000	F (fine)	10
16510-001	T (tough)	10

TOURNAMENT D-SNAP

High-end snap made of spring steel for jigheads and plugs. Thanks to the wide curve the action of plugs is optimized. Available in 3 sizes.

Art-No.	size	cont.
16512-000	S	10
16512-001	M	10
16512-002	L	10

TOURNAMENT SW-SNAP

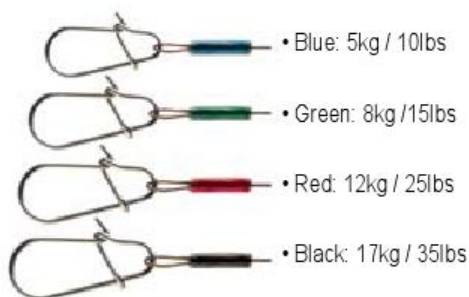

Extreme strong snap with cross-lock. The SW-SNAP is probably one of the strongest snaps available - unable to bend up. Perfect for plugs and jerkbaits. Thanks to the wide curve the action of plugs is optimized. Available in 2 sizes.

Art-No.	size	cont.
16512-100	T1	10
16512-103	T4	10

TOURNAMENT STEEL WIRES

With the DAIWA steel wires we present a combination of premium components with a thin and flexible 1x19 steel wire "Made in USA". Due to the special color code of the crimps you always can track back the individual strength of the wire.

According to the strength TOURNAMENT D-Snaps and SW-Snaps are used. For the steel wires with mounted hook the premium DT-4600 trebles are used.

TOURNAMENT ASSIST HOOK

When the fish are feeding very cautious, an additional treble is needed to increase the success. The new DAIWA Assist hooks cover the usual bait sizes.

SAQSAS WORMHOOKS

The new sharpening technology for fishing hooks. Via a special fluorid coating procedure common irregularities on the surface are eliminated nearly completely – the hook's tip is getting sharper. Thus the hook's intrusion is facilitated and improved – a better bite yield is the consequence. Plenty tests in Japan showed that SaqSas hooks intrude up to 40% easier compared to common sharpened hooks from Japan! Of course all SaqSas hooks are 100% made in Japan.

BASSERS WORMHOOK WOS

WOS – Wide Off-Set Hook. For all kind of fishing techniques, where a big, wide curve is requested. Perfect with compact, bellied lures. Ultra-sharp thanks to the new SaqSas sharpening technology.

NEW
SALTIGA TRAILER HOOK

This stinger system is built of very resistant two-layered Ultra-Dyneema material, which is made in Japan and usually is applied for fishing for GT and amberjack. The stinger system is designed for the use with large shads for fishing for cod and halibut. Highest linear strength and abrasion resistance are guaranteed. The two smaller hooks at the shank ensure that the stinger hook maintains its position at the shad. The split ring can easily be hooked into the eyelet of the jighead. The SALTIGA hook is made in Japan according to highest quality standards.

SOKKOU KNOT TOOL

SOKKOU – the Japanese expression for fast and easy – and that's what this small tool is all about. With the SOKKOU knot tool you can tie knots between monofilament leader and braided main line within seconds. With some experience you can use this tool even with closed eyes or in the dark. Usually, at cold weather or wind the connection between leader and braided main line can only be tied with some experience or much effort. With the SOKKOU knot tool this connection no longer represents a problem. Applicable for mono leaders up to ca. 0.40mm and braided main lines up to ca. 0.25mm. Detailed manual on the backside or as film via internet, respectively. An indispensable tool, which does not miss in any tackle box of our team anglers.

Easy – fast and light – SOKKOU!

Art-No.
15800-205

TOURNAMENT MICRO SPLIT RING OPENER

A small and smart tool for the change of small split rings. Everybody, who fishes frequently with small plugs knows the problem - as soon one wants to change the treble hook, conventional split ring pliers are simply too broad and harm the filigree split rings. With the TOURNAMENT micro split ring opener you can open even smallest split rings fast and without complications. With eyelet for roller clips.

Art-No.
16509-805

DAIWA MULTI CASES

With the MULTICASE lure boxes, DAIWA presents a selection of premium plastic boxes in diverse sizes for the season 2015. The boxes are extremely robust and resistant. Robust quick release fastener and the special plastic mixture ensure a long lifespan. With different compartment arrangements depending on the model. Ideal for small pieces as swivels, split rings and of course diverse softplastic lures and plugs. All boxes are softplastic resistant. All DAIWA MULTICASE boxes are produced in Japan according to highest quality standards.

DAIWA BAG RANGE

Right in time for the new season, DAIWA presents an enlarged bag range. Many of these bags have especially been developed for specific applications in cooperation with our team anglers and consultants. Within this premium program, practical use and modern design come first. Only high-quality materials and components are used. The whole program is produced in a high-class manufacture, which usually exclusively produces bags and transportation tubes for DAIWA Japan – highest built quality comes first.

NEW

SHOULDER TACKLE BAG 15820-015

Classical shoulder bag with water-repellent PVC bottom and padded shoulder strap. Ideal for the transportation of lure boxes, small pieces, etc. With original Realtree AP® Camo applications. Both superimposed pockets at the front with hook and loop fastener provide space for documents and accessories. The big main compartment provides space for a 32x22x6cm lure box. 15806-005	S	
15806-010	M	
15806-015	L	

NEOPRENE ROD BELT SET

Premium rod belt which is made of extremely flexible neoprene material. The belt's slot can easily be pulled over a rod's guide – thus the strap is secured non-slipping. Size S for spinning, match and feeder rods, size M for carp and surf rods.
Material: 90% neoprene, 10% nylon

Art-No.	size	
15806-030	20.0cm	
15806-050	32.0cm	

SEAT COVER 15805-109

With this small but mighty accessory you can keep your car seat dry and clean. Especially on seatrout fishing the frequent change of the fishing spot is quite common. With the DAIWA Seat Protector you don't have to take off your chest waders for short moves. The Car Seat Protector is easily fastened at the back of the head section and can be upended to the front as needed.

Material: 100% nylon

Art-No.	size
15805-109	157.0cm

NEOPRENE REEL COVER 15805-...

Premium reel protection for spinning reels, made of strong and flexible 3mm quality neoprene material. Thanks to the sophisticated construction, the bag can also be used for completely mounted rods – perfect for transport protection. The small size is fitting for reel sizes 1500-2500, the medium bag for sizes 3000-4000 and the big one for 4500-6000 sized reels. Version 15805-101 is made for baitcasting reels.

Material: 90% neoprene 10% nylon

Art-No.	size
15805-100	17x28cm
15805-105	19x32cm
15805-110	23x34cm
15805-101	12x26cm

SPOOL HARDCASE 15805-...

With the DAIWA spool hardcase you can transport and store your premium spare spools well secured. Size S for spools sizes 1500-2500, M for sizes 3000-4000 and L for 5000-6500 sized spools.

Material: 100% PVC

Art-No.	size
15805-250	6.5x11.5x7 cm
15805-400	7x12.5x7.5cm
15805-650	9x17x9cm

RAIL CLAMP 15809-005

For fixation of the mounted rod at the boat rail. Perfect, when the rod has to be stored in a mounted state when changing the fishing spot. Thanks to the fixation, the rod is protected against damages and tilting over.

Material: 100% nylon

Art-No.	size
15809-005	20x15 cm

DAIWA CARP RANGE

DAIWA D-POD

The DAIWA D-Pod is another highlight for carp anglers, who search for something special.

Completely made of premium aluminum and then coated black – this pod is hardly visible from the distance.

For the D-Pod we used common banksticks, thus you can set up your pod individually. If you open the big plastic screws at the jaws, you are able to adjust the leg's angle in steps of 30°. Due to the extension of the banksticks, there is no limit for the set up from a high to a low pod.

The buzzerbars are made for 3 rods and can be packed fast and compactly. By replacing the two fixing bars with banksticks you can also use the buzzerbars separately from the Rodpod.

Buzzerbars for 4 rods and banksticks with 15cm, 48cm, 66cm and 116cm are additionally available.

- ▶ Made of aluminum
- ▶ Main Sticks telescopic from 116cm to 200cm
- ▶ 4 Banksticks (telescopic from 48cm-75cm and 66cm-105cm)
- ▶ 2 Buzzerbars with a width of 42.5cm, up to 3 rods
- ▶ Incl. transportation bag, made of 600D polyester
- ▶ Transportation size: ca. 117x12x12cm
- ▶ Transportation weight: 3.5kg

NEW

BLACK WIDOW Carryall

This convenient carryall enables you to carry nearly all utilities to the water you need at a fishing trip over several days. The superimposed pockets provide much space for supplies like bite indicators. The bottom is rubberized and prevents the intrusion of moisture. Available as 40l and 70l version

Material bag: 100% polyester

Material bottom: 100% PVC

Art-No.	size	
18705-040	50x25x30 cm	
18705-070	60x32x40 cm	

NEW

BLACK WIDOW Holdall 12ft -3 / 13ft. 4

Premium padded holdall for 3 (12ft version) or 4 (13ft version) completely rigged rods. Additionally you can transport each 3 or 4 spare rods. This holdall has been designed to provide also enough space for rods with 50mm starter guide. A large superimposed pocket provides enough space for a carp landing net head or banksticks.

Material: 100% polyester

Art-No.	size	
18705-012	200x40 cm	
18705-013	210x48 cm

Material: 100% polyester

Art-No.	size	
18705-100	106x64 cm	

DAIWA CLOTHING

TEAM DAIWA FLOTATION SUIT

In cooperation with the leading producer for swimsuits and safety clothing in England we developed a swimsuit that fully satisfies the demand for high quality and safety aspects for fishing in Norway and Iceland as well as the hard conditions in the winter.

The TEAM DAIWA swimsuit captivates by its wearing comfort. The outer material made of 210D nylon is very supple and strainable and gives good mobility. Of course the TEAM DAIWA swimsuit is totally wind- and water-proof. (WP 10.000 rating!) By the special inner Taslon lining, the suits offer even for great cold pleasant and warm wearing comfort. All pockets are created to avoid water running into it when it is raining or there is froth. Of course the TEAM DAIWA swimsuit is in accordance with all European rules for conception of swimsuits. The TEAM DAIWA swimsuit is supplied together with a TEAM DAIWA transportation bag.

Outer material: 100% nylon

Insulation: 100% polyester

Transportation bag: 100% polyester
